

ParentVeda – Trying to Conceive (TTC) Product, Experience & System Architecture

The complete blueprint for ParentVeda's Pre-Conception Life Stage.

PART 1

ParentVeda – Trying to Conceive

Product Philosophy & Experience Vision

1. Introduction

ParentVeda was never intended to become another pregnancy application.

Nor was it intended to become another parenting application.

From its earliest principles, ParentVeda has always been designed around a much larger belief:

Families are not created when a baby is born. They begin much earlier—often the moment two people decide they want to become parents.

That decision changes lives.

It changes routines.

It changes relationships.

It changes health.

It changes identity.

ParentVeda's responsibility therefore does not begin at Week 4 of pregnancy.

It begins much earlier.

The Trying to Conceive (TTC) stage is not a new product.

It is **the first chapter of ParentVeda**.

2. The ParentVeda Life Journey

Most digital health products divide life into disconnected applications.

One app tracks periods.

Another tracks pregnancy.

Another tracks babies.

Parents repeatedly create accounts.

Enter the same information.

Learn new interfaces.

Build new histories.

Lose previous context.

ParentVeda rejects this model.

Instead, ParentVeda is built around one continuous family journey.

Planning a Family

↓

Trying to Conceive

↓

Pregnancy

↓

Birth & Recovery

Parenting (0–5 Years)

Future Life Stages

The user should never feel they have "moved to another app."

They should feel that

their journey has simply entered its next chapter.

3. The Philosophy of TTC

Trying to Conceive is not about pregnancy.

Trying to Conceive is not about ovulation.

Trying to Conceive is not about fertility tracking.

Trying to Conceive is about **hope**.

It is about

planning,

preparing,

learning,

healing,

supporting,

waiting,

trying,

coping,

and eventually celebrating.

Some families conceive within one month.

Some within six.

Some after IVF.

Some after years.

Some after loss.

ParentVeda must never assume that conception is guaranteed or immediate.

It must become

a calm companion,

not a countdown.

4. What ParentVeda Is NOT

The TTC experience must never become

- a period tracker,
- a fertility score,
- a symptom collector,
- a medical database,
- a gamified streak app,
- a pregnancy predictor.

Those already exist.

ParentVeda exists to answer a different question.

Instead of

"When are you ovulating?"

ParentVeda asks

"What can we do today to give ourselves the healthiest possible chance of becoming parents?"

Notice the word.

"We."

Not

"You."

5. The Core Product Mission

The mission of the TTC stage is simple.

Every day, help the couple become

healthier,

better informed,

more emotionally connected,

more medically prepared,

and more confident.

Conception is an outcome.

The journey is the product.

6. The ParentVeda Promise

Every ParentVeda life stage should make one promise.

Pregnancy promises

"We'll walk with you through pregnancy."

Parenting promises

"We'll help you raise your child."

Trying to Conceive promises

"We'll stand beside you while you build your family."

That subtle difference matters.

7. Product Psychology

The emotional state of someone trying to conceive is fundamentally different from someone who is pregnant.

Pregnancy is mostly certainty.

Trying to Conceive is uncertainty.

Every design decision should respect this.

The app should never create anxiety where none exists.

Never create guilt.

Never imply failure.

Never compare couples.

Never reward faster conception.

Never celebrate "perfect cycles."

ParentVeda celebrates effort.

Not outcomes.

8. Calm Over Control

One of ParentVeda's strongest principles already exists inside Pregnancy:

Calm over gamification.

TTC must inherit this.

No

XP.

Levels.

Badges.

Daily pressure.

Completion percentages.

Instead

gentle reminders,

soft encouragement,

quiet education,

small wins.

The goal is emotional safety.

9. Couple First

This is where ParentVeda can become genuinely different.

Almost every TTC application is designed around one user.

The woman.

ParentVeda should be designed around

the couple.

Not because biology is shared.

Because the journey is.

The app should constantly reinforce

"You're building a family together."

Not

"She is trying to conceive."

10. A New ParentVeda Original

Pregnancy has

Weeks.

Parenting has

Phases.

Trying to Conceive should introduce its own organising principle.

I don't think it should be

Cycle Day.

That's clinical.

Invisible.

Mechanical.

Instead

Cycle Day remains the backend truth.

The user experiences something different.

ParentVeda Chapters

I propose organising TTC into **Journey Chapters**.

Internally

Cycle Day 1

Cycle Day 2

Cycle Day 3

...

Externally

The parent experiences

Chapter 1

Preparing Together

Building healthy routines.

Understanding fertility.

Preparing emotionally.

Meeting experts.

Nutrition.

Lifestyle.

Chapter 2

Knowing Your Rhythm

Understanding cycles.

Ovulation.

Hormones.

Body literacy.

Without obsession.

Chapter 3

Trying Together

The fertile window.

Partner support.

Communication.

Relationship.

Medical guidance.

Chapter 4

The Waiting Days

Perhaps the most emotionally difficult stage.

Instead of making parents stare at a countdown,

ParentVeda helps them

learn,

reflect,

rest,

connect.

Chapter 5

A New Beginning

Positive test.

Transition into Pregnancy.

The app quietly evolves.

No restart.

No migration.

Only a new chapter.

These chapters are **emotional**.

Not biological.

That's exactly what ParentVeda has always done.

11. Continuity

Everything that parents already know should remain.

Navigation stays.

Floating tab bar stays.

Card language stays.

Typography stays.

Hero philosophy stays.

Ask Veda stays.

Community stays.

Prepare stays.

Calendar stays.

Journal stays.

Products stay.

Experts stay.

The user should feel

"I've entered an earlier chapter of the same book."

12. The Today Philosophy

Every ParentVeda stage has a Today.

Pregnancy

Today's Pregnancy.

Parenting

Today's Parenting.

Trying to Conceive

Today's Journey.

Not

Today's Cycle.

Not

Today's Ovulation.

Today's Journey.

That single decision changes the emotional posture of the entire application.

13. The Role of Science

ParentVeda is evidence-based.

But science should never dominate the experience.

Medical information should always answer

"What does this mean for me today?"

rather than

"Here is a hormone graph."

Parents need interpretation.

Not data dumps.

14. Progress Without Pressure

Progress should exist.

Pressure should not.

Examples

Instead of

"Day 18 of Cycle"

ParentVeda might say

"This week, your body may be preparing for ovulation."

Instead of

"Only 3 fertile days left."

ParentVeda says

"If this feels like the right time for you both, this is a naturally fertile part of your cycle."

Same science.

Different emotion.

15. The Partner Philosophy

Father Mode should not begin in pregnancy.

It begins in TTC.

His role is not

observer.

His role is not

assistant.

His role is

partner.

His daily experience should include

Today's Mission.

Today's Learn.

Today's Reflection.

Today's Nutrition.

Today's Support.

Shared Journal.

Shared Calendar.

Shared Care Circle.

Exactly like Pregnancy,

but adapted to TTC.

16. The Transition Principle

The most magical moment in ParentVeda should not be onboarding.

It should be transition.

The day a parent records

Positive Pregnancy Test

the application quietly changes.

No onboarding.

No "create pregnancy."

No switching apps.

The home simply says

A beautiful new chapter begins.

Everything else already knows what to do.

17. The Final Philosophy

The ultimate measure of success is not

monthly active users,

or

retention,

or

conversion.

It is this:

If a couple looks back three years later and feels that ParentVeda quietly walked beside them—from deciding to have a child, through pregnancy, through birth, and into early childhood—then ParentVeda has succeeded.

That is the standard every feature in the TTC experience should be measured against.

End of Part 1

I actually think this should become the **constitutional document** for the entire TTC product. Every future design, feature, backend decision, and content choice should be checked against these principles.

One suggestion before we move to Part 2: after reading your existing Product Reference, I think **Part 2 should mimic its structure** almost exactly. Instead of inventing a new format, we should write it like an official ParentVeda specification:

- What ParentVeda TTC Is
- Product Psychology
- Design Language
- The TTC App
- Partner Mode
- Tools
- Community
- Ask Veda
- Platform Underneath
- Rules Any New Feature Must Follow

That way, your Pregnancy, Parenting, and TTC documents all read like they were written by the same product organisation, which reinforces the "one product, multiple life stages" philosophy.

PART 2

ParentVeda Trying to Conceive (TTC)

Complete Product Specification

2.1 The Most Important Structural Decision

TTC is not a Period Tracker.

This is the single most important architectural decision in the entire TTC product.

Almost every fertility application is built around one object:

The Menstrual Cycle

Everything else becomes secondary.

ParentVeda deliberately rejects this model.

The menstrual cycle is an important biological signal.

It is **not** the centre of the experience.

Instead, ParentVeda is built around another question:

"Where are you in your journey towards becoming parents?"

The menstrual cycle becomes one of many signals used to personalise the experience.

The journey becomes the product.

2.2 The Organising Principle

Pregnancy uses

Weeks

Parenting uses

Phases

Trying to Conceive introduces

Chapters

Chapters are not tied to time.

They are tied to emotional progression.

A person with

- a 26-day cycle
- a 34-day cycle
- PCOS
- IVF
- irregular periods

should all feel equally understood.

Internally the backend stores

- Cycle Day
- Hormonal State
- Ovulation
- Fertility Window

The parent experiences

Chapter.

This separation allows ParentVeda to remain emotionally calm while remaining medically accurate.

2.3 The Navigation

The TTC application intentionally mirrors the Pregnancy application.

Users should not learn a new application.

The shell remains identical.

Floating pill navigation remains identical.

Transitions remain identical.

Visual rhythm remains identical.

The difference lies only in content.

Primary Navigation

1. Today
2. Prepare
3. Tools
4. Calendar
5. Community

Ask Veda continues floating globally.

Profile remains inside the avatar.

Exactly like Pregnancy.

2.4 Today

Today remains the emotional home.

Not the dashboard.

Not the tracker.

Not analytics.

The emotional home.

Its purpose is identical to Pregnancy.

Answer one question:

What matters today?

The order of the screen remains almost unchanged.

Header

Logo

Bookmarks

Search

Avatar

Exactly identical.

Hero

Instead of

Week 12

Day 4

The hero becomes

Today's Journey.

Possible examples

Preparing Together

Learning Your Rhythm

This Week's Focus

Growing Healthy Habits

Trying Together

Waiting Gently

Depending on the current context.

Instead of trimester progress

The hero contains

Journey Progress

Current Chapter

Current Focus

Current Goal

Three shortcuts remain.

Instead of

Baby

Mother

What's Next

They become

Me

Us

What's Next

Daily Learn

Pregnancy has

Today's Parenting Tip.

TTC gets

Today's Insight.

One evidence-based insight.

Maximum 30 seconds to consume.

One clear takeaway.

Today's Video

Same component.

Different content.

Examples

Nutrition

Ovulation

Male Fertility

Stress

Exercise

Medical Testing

Lifestyle

Relationship

Today's Ritual

Pregnancy has Garbh Sanskar.

TTC should have something equally unique.

Not meditation.

Not mindfulness.

A broader concept.

I propose

Daily Ritual

Containing

Today's Reflection

Today's Breath

Today's Conversation

Today's Gratitude

Today's Action

Five minutes.

Exactly like Garbh Sanskar.

Different purpose.

Today's Journal

Same component.

Different prompts.

Examples

How are you feeling today?

What gave you hope today?

Something you appreciated about your partner.

Questions for your doctor.

Dreams about your future family.

Today's Nutrition

One recommendation.

One explanation.

One meal.

One nutrient.

One Indian context.

Exactly like Pregnancy.

Today's Movement

Instead of Exercise Library.

Today's suggested movement.

Walking.

Stretching.

Yoga.

Strength.

Rest.

Today's Product

Same recommendation engine.

Different catalogue.

2.5 Chapters

Pregnancy

↓

Weeks

TTC

↓

Chapters

Every chapter has

Hero

Overview

Science

Partner

Nutrition

Exercise

Videos

Reads

Action Plan

Medical Guidance

Journal Prompts

Ask Veda

Products

Expert Videos

Exactly the same hierarchy as Pregnancy.

Only the content changes.

2.6 Prepare

Prepare no longer prepares for birth.

It prepares for conception.

Categories become

Expert Consultations

Courses

Fertility Yoga

Nutrition

Mental Wellness

Medical Assessments

Partner Workshops

IVF Support

Lifestyle Programs

Everything follows the exact editorial style already established.

2.7 Tools

This becomes the largest feature after Today.

Its philosophy remains

Tools help.

Tools do not judge.

Every tool exists even if unused.

Exactly like Pregnancy.

The TTC Tools Hub contains

Cycle Companion

Ovulation Companion

Fertility Window

Supplements

Medication

Medical Tests

Partner Health

Lifestyle

Weight

Nutrition Planner

Exercise Planner

Sleep

Mood

Stress

Journal

Appointments

Product Guide

Can I...?

Ask Veda

Journey Map

Reports

Health Records

Each tool follows identical UX principles.

2.8 Journey Map

Pregnancy

Journey Map

↓

Week Nodes

TTC

Journey Map

↓

Journey Chapters

Milestones become

Understanding Your Cycle

Healthy Habits

Medical Readiness

Trying Together

Waiting

Positive Test

Professional Guidance

Partner Milestones

Everything illustrated in ParentVeda's style.

2.9 Calendar

The calendar philosophy remains unchanged.

It becomes

The TTC Command Centre.

Contains

Cycle

Ovulation

Appointments

Supplements

Medication

Tests

Scans

Journal

Community Events

Consultations

Personal Events

Exactly the same architecture.

2.10 Community

Community remains calm.

Never competitive.

Never comparison driven.

Suggested communities

Trying Naturally

First Month

PCOS

Endometriosis

Male Fertility

IVF

IUI

Lifestyle

Nutrition

Emotional Support

Partner Community

Experts

Exactly the same feed architecture.

2.11 Ask Veda

Ask Veda remains unchanged.

Only the context changes.

Examples

Why is my cycle late?

How accurate are ovulation strips?

Should we see a fertility specialist?

What tests should we do?

Can stress delay ovulation?

How does PCOS affect fertility?

The answer engine remains identical.

2.12 Partner Mode

This becomes significantly stronger than Pregnancy.

The partner joins before conception.

His Today becomes

Today's Learn

Today's Support

Today's Mission

Today's Reflection

Today's Nutrition

Today's Reading

Read Together

Shared Journal

Appointments

His purpose is not observation.

His purpose is participation.

2.13 Profile

Profile mirrors Pregnancy.

Additional sections

Journey Settings

Cycle Settings

Partner

Medical History

Health Profile

Supplements

Reports

Doctors

Care Circle

Referral Source

Language

Notifications

Invite

Everything else remains.

2.14 Products

The product philosophy remains

Trust before commerce.

Recommendations first.

Shopping second.

Categories

Prenatal Vitamins

Fertility Supplements

Books

Ovulation Kits

Pregnancy Tests

Lifestyle Products

Wellness

Partner Products

Research-backed only.

2.15 Care Circle

This becomes one of ParentVeda's signature experiences.

Instead of

Doctor

Hospital

Partner

being isolated

The app introduces

Your Care Circle

Containing

Partner

Doctors

Nutritionists

Lactation Experts (later)

Psychologists

Hospitals

ParentVeda

Showing that

building a family is a shared journey.

2.16 The Transition

The transition from TTC to Pregnancy must be invisible.

When a user confirms pregnancy

Nothing changes visually.

Only

Today's Journey

becomes

Week 4.

Prepare changes.

Tools adapt.

Community adapts.

Content adapts.

The user should feel

"I'm still inside ParentVeda."

Not

"I've started another application."

2.17 Design Principles

The TTC application inherits every design principle already established by ParentVeda:

- Calm over urgency.
- Evidence before opinion.
- Progressive disclosure.
- One clear primary action per screen.
- Personalisation changes content, never navigation.
- Empty states teach features rather than hide them.
- Soft gradients.
- Editorial cards.
- Generous whitespace.
- Premium typography.
- Warm, reassuring language.
- Indian-first content.
- Couple-first experiences.
- Medical responsibility with emotional sensitivity.

Every new screen, feature, or interaction must be evaluated against these principles before implementation.

2.18 Definition of Success

A TTC app succeeds when it predicts ovulation.

ParentVeda TTC succeeds when a couple says:

"We never felt alone during one of the most uncertain chapters of our lives."

That is the standard by which every feature, every screen, and every design decision should ultimately be measured.

End of Part 2

One observation before we write Part 3

After writing Parts 1 and 2, I think we have discovered something important: **TTC should not simply mirror Pregnancy—it should become the foundation from which Pregnancy naturally grows.**

Because of that, I think **Part 3 should be the most detailed section of the entire document.** Instead of listing features, we'll define each feature like a true product specification:

- Why it exists
- User problem it solves
- UX philosophy
- Screen flow
- Backend behaviour
- Supabase data model
- Directus content model
- Edge cases
- Future extensibility
- Integration with Ask Veda, Care Circle, Community, Referrals, and Experts

That level of specification will make it much easier for Claude Code to implement the product consistently without inventing behaviour on its own.

Parts 1 and 2 answered **why the product exists** and **how the product is organised**.

Part 3 answers: *What exactly are we building?*

This should become the PRD (Product Requirements Document) for the entire TTC product.

PART 3

ParentVeda TTC

Complete Feature Specifications

3.0 Product Architecture

Every feature in ParentVeda TTC should belong to one of six product pillars.

LEARN

TRACK

PREPARE

CONNECT

CARE

GROW

Every screen, card, notification, recommendation and AI interaction should support one (or more) of these pillars.

This ensures ParentVeda never becomes a collection of disconnected tools.

It becomes a coherent operating system.

PILLAR 1 — LEARN

Philosophy

Knowledge should arrive exactly when it becomes useful.

Not earlier.

Not later.

Learning is contextual.

The objective is not to make parents experts.

The objective is to help them make today's decision with confidence.

3.1 Today's Insight

Purpose

Every morning, ParentVeda surfaces one evidence-based insight.

It must take less than 60 seconds to consume.

Examples

- Understanding fertile cervical mucus
 - Why sleep matters for fertility
 - Male fertility myths
 - Caffeine and conception
 - PCOS explained simply
 - Understanding AMH
 - IVF basics
 - Stress and fertility
-

Rules

One topic.

One message.

One action.

No information overload.

Backend

Content Type

daily_insight

Fields

- Title
 - Summary
 - Full Article
 - Reading Time
 - Scientific References
 - Personalisation Tags
 - Cycle Relevance
 - Medical Conditions
 - Partner Visibility
-

3.2 Learning Library

A searchable knowledge centre.

Categories

- Female Fertility
- Male Fertility
- Nutrition
- Lifestyle
- Medical Tests
- Fertility Treatments
- Emotional Wellbeing
- Relationships
- Genetics
- Sexual Health
- Common Conditions
- Research Explained

Each article follows ParentVeda's editorial structure.

What

Why

What this means for you

Today's takeaway

3.3 Daily Myth

Every day

One myth.

One truth.

Examples

"Myth: You only have one fertile day."

"Myth: Infertility is mostly caused by women."

"Myth: Stress alone causes infertility."

Short.

Friendly.

Research-backed.

PILLAR 2 — TRACK

Tracking exists to reduce uncertainty.

Not increase anxiety.

Every tracker answers

"How can ParentVeda help me today?"

Not

"How much data can we collect?"

3.4 Cycle Companion

Not called

Cycle Tracker.

Purpose

Understand patterns.

Not predict perfection.

Capabilities

Cycle Length

Period Logging

Symptoms

Flow

Mood

Energy

Sex

Medications

Notes

Backend stores

Yoga

Strength

Stretching

Breathing

Pelvic floor

Mobility

Recommendations change according to

BMI

Cycle

Medical conditions

Energy

3.12 Sleep Companion

Hours

Quality

Routine

Suggestions

Partner comparison optional

3.13 Mental Wellbeing

Daily Check-in

Stress

Anxiety

Mood

Reflection

Breathing

Meditation

Professional help

Everything designed to reduce emotional pressure.

PILLAR 4 — CONNECT

No one should feel alone.

3.14 Partner Mode

This deserves equal importance to the woman's experience.

Partner receives

Today's Learn

Today's Mission

Today's Support

Shared Calendar

Shared Journal

Appointment reminders

Medical explanations

Nutrition

Lifestyle

Relationship exercises

Partner isn't an observer.

Partner is an active participant.

3.15 Shared Journal

Both partners can write.

Private entries.

Shared entries.

Voice notes.

Photos.

Letters to future child.

Milestones.

Everything survives into Pregnancy.

3.16 Community

Community is organised around support.

Not popularity.

Communities include

Trying Naturally

PCOS

Endometriosis

IVF

Male Fertility

Loss & Recovery

Nutrition

Mental Wellness

Ask the Doctor

Partner Lounge

PILLAR 5 — CARE

Professional care integrated.

Not separate.

3.17 Care Circle

Your ecosystem.

Partner

Doctors

Hospitals

Nutritionists

Psychologists

Clinics

ParentVeda

Every recommendation shows

Who recommended it.

Trust becomes transparent.

3.18 Expert Consultation

Integrated booking.

Video consultation.

Notes.

Prescriptions.

Reports.

Follow-up.

Everything already designed for ParentVeda Pro.

3.19 Medical Journey

ParentVeda adapts according to

Trying Naturally

Ovulation Induction

IUI

IVF

Frozen Embryo Transfer

Donor Cycles (future)

Adoption Planning (future)

The app never forces one pathway.

PILLAR 6 — GROW

Growth means moving forward.

Not just conceiving.

3.20 Milestones

Examples

Started Prenatal Vitamins

Completed Blood Tests

Partner Joined

Met Fertility Specialist

Completed Lifestyle Plan

Learned About Ovulation

Completed First Cycle Together

Positive Pregnancy Test

Every milestone reflects effort.

Not success alone.

3.21 Journey Timeline

A beautiful chronological history.

Appointments

Reports

Journal

Photos

Tests

Milestones

Notes

Videos watched

Courses completed

Everything becomes one continuous timeline.

This timeline seamlessly continues into Pregnancy and later Parenting.

3.22 Transition Engine

Perhaps the most important feature.

When pregnancy is confirmed

The app doesn't restart.

Instead

Life Stage

↓

Trying to Conceive

Pregnancy

Everything migrates automatically.

Shared Journal continues.

Partner continues.

Calendar continues.

Reports continue.

Care Circle continues.

Ask Veda changes context.

Community changes.

Daily Journey becomes

Week 4.

Nothing is lost.

The user feels continuity.

AI Across the Entire Product

AI should never replace doctors.

AI should act as

Interpreter.

Guide.

Teacher.

Companion.

Navigator.

Examples

Explain reports.

Summarise consultations.

Prepare questions for appointments.

Recommend articles.

Suggest recipes.

Interpret symptoms responsibly.

Generate journal summaries.

Recommend experts.

Never diagnose.

Never prescribe.

Always encourage professional care when appropriate.

Feature Design Rules

Every new feature added to ParentVeda TTC must satisfy all of the following:

1. **Emotion before information** — reduce anxiety before presenting data.
 2. **Evidence before opinion** — every recommendation should be grounded in reliable medical guidance.
 3. **One clear purpose** — avoid multifunction screens that overwhelm users.
 4. **Couple-first where appropriate** — involve both partners when it adds value.
 5. **Continuity across life stages** — anything that should naturally continue into Pregnancy or Parenting must be designed to do so.
 6. **Calm, premium experience** — avoid urgency, gamification, or fear-based messaging.
 7. **Privacy by design** — fertility data is deeply personal and should be handled with explicit consent and clear controls.
-

Closing Principle

The feature set of ParentVeda TTC should not be judged by the number of trackers, screens, or tools it contains.

It should be judged by a simpler question:

"If a couple used ParentVeda from the day they decided to start a family until their child turned five, would they ever feel the need to leave the ParentVeda ecosystem?"

If the answer is **no**, then TTC has fulfilled its role—not as a standalone fertility app, but as the opening chapter of a lifelong parenting companion.

Before we move to Part 4

Reading back over Parts 1–3, I think there's one architectural enhancement we should make in Part 4. Rather than designing the backend around isolated modules like *Cycle*, *Journal*, *Community*, and *Consultations*, we should model it around a **single Family Journey Graph**. Everything—people, life stages, health records, content, experts, referrals, journals, and AI context—becomes connected through that graph.

That approach will make ParentVeda far more extensible as you add future stages like **Birth & Recovery** and **School Years**, without repeatedly redesigning the data model. I think that's a stronger long-term architecture than treating TTC as just another module.

Excellent. This is the part that most AI-generated product documents get wrong.

Most architecture documents start with **tables**, **APIs**, and **database schemas**.

I don't want to do that.

Because once you've understood ParentVeda over the last few months, one thing has become obvious:

ParentVeda is not a collection of modules.

It is a **living journey**.

That means the backend should also think like a journey.

This part is probably the most important part of the entire document because if this architecture is correct, Pregnancy, Parenting, Birth & Recovery, School Years and even future AI capabilities can all be built on top of it.

PART 4

ParentVeda TTC

System Architecture & Technical Blueprint

4.1 Architecture Philosophy

Most applications are built around features.

Cycle Module

↓

Calendar Module

↓

Journal Module

↓

Community Module

Every feature owns its own data.

Every module knows very little about the others.

Over time this creates

- duplicated data

- duplicated logic
- fragmented experiences
- difficult personalisation
- difficult AI

ParentVeda should reject this architecture.

Instead ParentVeda should be built around

The Family Journey Graph

Everything belongs to one journey.

Family

↓

Journey

↓

Life Stage

↓

Experiences

↓

Knowledge

↓

Health

↓

Growth

Every feature connects to this graph.

Not to another feature.

4.2 The ParentVeda Core Entity

Everything revolves around one entity.

Not

Woman.

Not

Pregnancy.

Not

Cycle.

Instead

Family Journey

Family Journey

└— Users

└— Partner

└— Children

└— Life Stage

└— Care Circle

└— Timeline

└— Health

└— Content

└— AI Context

└— Commerce

└─ Community

└─ Consultations

Everything references this.

This becomes the single source of truth.

4.3 Life Stage Engine

Rather than creating

Pregnancy Database

Parenting Database

TTC Database

Create

Life Stage Engine

Life Stage

Future:

Teacher

Coach

Grandparent

One identity.

Multiple roles.

4.5 Relationship Graph

Instead of

User

↓

Partner

Store relationships.

User

Relationship

Partner

Child

Doctor

Hospital

Nutritionist

Community

Care Partner

Now AI understands

who belongs to whom.

4.6 Timeline Engine

Everything becomes

Timeline Events.

Examples

Started TTC

Completed Blood Test

Journal Entry

Ovulation

Expert Consultation

Booked Appointment

Started Pregnancy

Week 12

Birth

Baby Milestone

Vaccination

Nothing disappears.

Everything becomes history.

Timeline becomes

ParentVeda Memory.

4.7 Health Graph

Instead of

Symptoms table

Reports table

Medication table

Build

Health Graph

Health

└─ Conditions

└─ Reports

└─ Medications

└─ Allergies

└─ Nutrition

└─ Sleep

└─ Exercise

└─ Weight

└─ Mental Health

└─ Fertility

└─ Pregnancy

└─ Parenting

AI now understands

health over time.

4.8 Knowledge Engine

Content shouldn't exist independently.

Everything becomes

Knowledge Objects.

Knowledge Object

Topic

Stage

Audience

Scientific Level

Language

Medical Review

Personalisation

One article.

Many contexts.

Example

Folic Acid

appears inside

TTC

Pregnancy

Articles

Ask Veda

Daily Learn

Doctor Notes

Notifications

Without duplication.

4.9 AI Context Engine

This is where ParentVeda becomes extremely powerful.

Instead of sending ChatGPT random prompts,

AI receives structured context.

Current Life Stage

Current Chapter

Cycle

Conditions

Supplements

Community

Recent Questions

Medical Reports

Partner Status

Journal

Today's Learn

Goals

Ask Veda now understands

the journey.

Not just the question.

Example

Instead of

"What is AMH?"

AI knows

Trying Naturally

Age 33

PCOS

Low AMH

Partner Joined

Second Cycle

Saw Fertility Specialist

The answer becomes

completely personalised.

4.10 Content Engine

Content becomes

Composable.

Today's Journey

Hero

Insight

Nutrition

Movement

Reflection

Journal

Video

Ask Veda

Product

Mission

Every card

references

content objects.

Nothing hardcoded.

4.11 Personalisation Engine

ParentVeda never changes

navigation.

Only

content.

Inputs include

Life Stage

Cycle

Medical Conditions

Goals

Partner Status

Age

BMI

Preferences

Language

Doctor Advice

Engagement

The output is

Today's experience.

4.12 Notification Engine

Notifications become

Context-aware.

Never generic.

Examples

Instead of

Take supplement.

Say

Your folic acid reminder is here. Staying consistent today supports your preparation for pregnancy.

Instead of

Appointment tomorrow.

Say

You and your partner have a consultation tomorrow with Dr Sharma.

Same reminder.

Different feeling.

4.13 Care Circle Engine

Every recommendation stores

Source.

Example

Recommended By

↓

ParentVeda

↓

Doctor

↓

Hospital

↓

Partner

↓

Nutritionist

Everything becomes transparent.

Users know

why something appears.

4.14 Referral Engine

Already designed previously.

Built directly into

Journey.

Referral never disappears.

Journey always knows

where trust began.

Doctor

Hospital

Clinic

Friend

Campaign

Community

Everything becomes attribution.

4.15 Community Engine

Communities become

Context-aware.

Instead of

joining manually,

AI recommends

Communities

Experts

Articles

Courses

based on

Journey.

4.16 Consultation Engine

Already shared previously.

Integrated.

Appointments automatically connect to

Timeline

Reports

Journal

AI

Care Circle

Calendar

Community

Everything.

4.17 Commerce Engine

Commerce becomes

Recommendation

not catalogue.

Products appear because

they make sense.

Not because

they sell.

Every recommendation stores

Evidence

Reason

Reviewer

Doctor

Research

4.18 Analytics Engine

Analytics are primarily for improving the user experience—not simply reporting metrics.

The platform should observe:

Product Analytics

- Feature adoption
- Completion rates
- Retention
- Engagement
- Journey progression

Health Analytics

- Cycle consistency (when appropriate)
- Supplement adherence
- Sleep trends
- Activity trends

Content Analytics

- Most helpful articles
- Completion rates
- Ask Veda topics
- Search behaviour

Operational Analytics

- Consultation bookings
- Community participation
- Referral performance
- Commerce conversions

Wherever possible, analytics should support better personalisation rather than simply producing dashboards.

4.19 Security & Privacy

Trust is one of ParentVeda's core product features.

The architecture should follow a privacy-by-design approach.

Key principles:

- Row Level Security (RLS) for all user-owned data.
- Explicit consent for partner sharing.
- Fine-grained permissions for Care Circle members.
- Encryption for sensitive health records.
- Secure storage for reports and media.
- Audit logs for medical record access.
- Data portability and account deletion workflows.
- Clear separation between operational data and analytics.

Health information should never be exposed beyond the permissions explicitly granted by the user.

4.20 Scalability Principles

The architecture should support future expansion without redesign.

Future life stages should be added by configuration rather than rebuilding core systems.

Potential future stages include:

- Birth & Recovery
- Parenting (already present)
- School Years
- Adolescence
- Women's Health
- Family Wellness

If the architecture is correct, these become new life stages that plug into the existing Journey Engine instead of becoming separate products.

4.21 Recommended Technology Stack

Based on everything we've discussed previously, the technology stack remains consistent:

Frontend

- Flutter (single codebase)
- Riverpod for state management
- GoRouter for navigation

Backend

- Supabase
 - PostgreSQL
 - Authentication
 - Storage
 - Realtime
 - Edge Functions

Content Management

- Directus (editorial and operational CMS)

Video & Consultations

- LiveKit

Notifications

- Firebase Cloud Messaging
- Apple Push Notification Service

Search

- PostgreSQL full-text search initially
- Dedicated search layer in future if required

This keeps the platform cohesive while leaving room to scale.

4.22 Architecture Principles

Every technical decision should satisfy these principles:

1. **Journey over modules** — design around the Family Journey rather than isolated features.
 2. **Configuration over duplication** — new life stages should be configured, not rewritten.
 3. **One source of truth** — avoid storing the same concept in multiple places.
 4. **Context before AI** — AI should always receive structured context, not just free text.
 5. **Privacy by design** — user trust is a platform capability, not an afterthought.
 6. **Extensibility** — every major service should anticipate future life stages.
 7. **Editorial flexibility** — content teams should control experiences without engineering changes wherever possible.
-

End of Part 4

One recommendation before Part 5

While writing this section, I realised something that I think will make ParentVeda significantly stronger.

So far, we've discussed **content** as articles, videos, nutrition tips, journal prompts, and similar assets.

I think that's too narrow.

In Part 5, I want to define a **Content Intelligence System** instead.

Rather than asking, "What content do we have?", we'll define **every reusable knowledge object** in ParentVeda—articles, rituals, videos, doctor tips, partner missions, affirmations, recipes, research summaries, trackers, prompts, notifications, AI snippets, and more—as structured, reusable content blocks.

That would allow Directus to become far more than a CMS; it becomes the **knowledge brain** that powers every life stage, every screen, and every AI interaction consistently across the entire ParentVeda platform. I think that's a much more future-proof approach than treating content as isolated pages or articles.

Excellent. I actually think **Part 5 is the section that will make ParentVeda impossible to copy.**

Pregnancy apps can be copied.

Cycle trackers can be copied.

Even AI chatbots can be copied.

But a **well-designed knowledge system cannot**.

The real moat of ParentVeda isn't Flutter.

It isn't Supabase.

It isn't AI.

It is **the knowledge architecture**.

I would actually rename this section.

Not

Content Architecture

Instead

ParentVeda Knowledge & Intelligence Architecture

Because this is much bigger than content.

PART 5

ParentVeda Knowledge & Intelligence Architecture

5.1 Philosophy

Most health applications think about content.

ParentVeda should think about knowledge.

There is an important difference.

Content is something you publish.

Knowledge is something the platform understands.

For example

Instead of creating

Article:

Folic Acid

ParentVeda creates

Knowledge Object

Folic Acid

That one object can power

- Today's Learn
- Ask Veda
- Daily Tip
- Nutrition
- Doctor Consultation
- Articles
- Notifications
- Courses
- Community
- AI Responses
- Commerce Recommendations

One object.

Infinite experiences.

5.2 ParentVeda Knowledge Brain

Everything inside ParentVeda should ultimately become a knowledge object.

Knowledge Brain

↓

Medical

Nutrition

Exercise

Mental Wellbeing

Relationship

Baby Development

Parenting

Products

Research

Experts

Every screen simply assembles the appropriate knowledge.

5.3 Knowledge Object

Every object should have a universal structure.

Object ID

Title

Description

Category

Life Stage

Audience

Evidence Level

Scientific Sources

Language

Media

Related Objects

↓

Tags

↓

Version

↓

Review Date

This allows every piece of knowledge to remain reusable.

5.4 Knowledge Categories

I recommend building ParentVeda around approximately **18–20 major knowledge domains**.

For TTC these include:

Fertility

- Ovulation
 - Hormones
 - AMH
 - Egg Quality
 - Sperm Health
 - Implantation
-

Nutrition

- Vitamins
 - Minerals
 - Hydration
 - Fertility Foods
 - Indian Diet
 - Vegetarian Nutrition
-

Lifestyle

- Sleep
 - Stress
 - Alcohol
 - Smoking
 - Caffeine
 - Exercise
-

Medical

- PCOS
 - Endometriosis
 - Fibroids
 - Thyroid
 - Diabetes
 - IVF
 - IUI
-

Emotional Wellbeing

- Anxiety
 - Waiting
 - Hope
 - Relationship
 - Communication
 - Grief
 - Pregnancy Loss
-

Partner

- Male Fertility
 - Nutrition
 - Support
 - Lifestyle
 - Emotional Health
-

5.5 Content Types

Every knowledge object can appear in different formats.

Instead of storing duplicate content

Store different presentations.

Example

Knowledge

Ovulation

Presentations

Article

60-second Insight

Video

Doctor Tip

Journal Prompt

Ask Veda Answer

Infographic

Course Lesson

Quiz

Checklist

Notification

Everything references

One source of truth.

5.6 Daily Experience Engine

The Today screen should never be manually designed.

Instead

Today's Journey is assembled dynamically.

Today's Journey

Hero

Insight

Nutrition

Movement

Reflection

Journal

Partner Mission

Video

Research

Product

Ask Veda Prompt

Each card comes from the Knowledge Brain.

5.7 Personalisation Engine

The platform should decide

"What is most useful today?"

Inputs include

- Life Stage
- Journey Chapter

- Cycle
- Conditions
- Age
- BMI
- Goals
- Reports
- Sleep
- Mood
- Partner Status
- Doctor Recommendations

Outputs become

Today's Experience.

Two users should rarely see the exact same home screen.

5.8 The ParentVeda Intelligence Layer

This is where I think ParentVeda can become significantly more intelligent than existing parenting and fertility applications.

Rather than only recommending content,

the Intelligence Layer should recommend

- Articles
- Experts
- Communities
- Recipes
- Exercises
- Supplements
- Questions for the Doctor
- Journal Prompts
- Courses
- Products
- Medical Tests
- Lifestyle Changes

Everything comes from one recommendation engine.

5.9 Ask Veda Knowledge Model

Ask Veda should never search articles.

It should reason over

Knowledge Objects.

When the user asks

"Can PCOS delay ovulation?"

Ask Veda retrieves

Medical Objects

↓

Research

↓

Cycle Context

↓

User Context

↓

Previous Questions

↓

Doctor Advice

↓

Community Insights (where appropriate)

↓

Related Learning

The answer becomes

contextual.

5.10 Editorial Workflow

Every knowledge object should pass through a structured lifecycle before reaching users.

Draft

Medical Review

Editorial Review

Clinical Approval (where required)

Translation

Publishing

Monitoring

Scheduled Review

This ensures that evidence-based information stays accurate over time and reduces the risk of outdated advice remaining live.

5.11 Directus Collections

Rather than creating dozens of unrelated collections, Directus should organise knowledge into coherent domains.

Example collection groups:

Core Knowledge

- Knowledge Objects
- Topics
- Tags
- Evidence Sources
- Medical References

Learning

- Articles
- Daily Insights
- Videos
- Courses
- Doctor Tips

Experience

- Journal Prompts
- Reflections
- Rituals
- Partner Missions
- Notifications

Nutrition

- Foods
- Recipes
- Nutrients
- Supplements

Movement

- Exercises
- Yoga
- Mobility
- Breathing

Experts

- Doctors

- Clinics
- Programmes
- Consultation Templates

The goal is editorial flexibility without duplicating information.

5.12 Knowledge Relationships

Knowledge should behave like a graph rather than isolated pages.

For example:

PCOS

↓

Related To

↓

Ovulation

↓

Related To

↓

AMH

↓

Related To

↓

Lifestyle

↓

Related To

↓

Weight

↓

Related To

↓

Nutrition

↓

Related To

↓

Exercise

This relationship model enables richer recommendations and more intelligent AI responses.

5.13 ParentVeda Learning Paths

Instead of asking users to search endlessly,

ParentVeda should assemble guided journeys.

Examples:

New to TTC

- Fertility Basics
 - Understanding Your Cycle
 - Nutrition
 - Partner Health
 - Medical Check-up
-

PCOS Journey

- Understanding PCOS
 - Lifestyle
 - Nutrition
 - Exercise
 - Treatment Options
 - Emotional Support
-

IVF Journey

- Preparing for IVF
- Medications
- Procedures
- Waiting Period
- Recovery
- Emotional Wellbeing

Each path combines multiple knowledge objects into a structured learning experience.

5.14 AI Memory Layer

AI should remember meaningful context within the user's journey (with appropriate user consent).

Examples include:

- Recently discussed topics
- Saved articles
- Consultation summaries
- Journal themes
- Learning progress
- Questions prepared for doctors

This enables Ask Veda to build on previous conversations rather than treating every interaction as isolated.

5.15 Multi-Life-Stage Knowledge

One of ParentVeda's biggest advantages is that knowledge survives transitions.

For example:

Folic Acid

Appears in:

- TTC
- Pregnancy
- Nutrition
- Ask Veda
- Daily Learn
- Doctor Consultations

It is not recreated for each stage.

The presentation changes.

The underlying knowledge remains the same.

5.16 Knowledge Quality Principles

Every knowledge object should satisfy these principles:

1. Evidence-based and medically reviewed where appropriate.
 2. Written in clear, empathetic language.
 3. Action-oriented rather than purely descriptive.
 4. Reviewed on a scheduled cadence.
 5. Version controlled with transparent editorial history.
 6. Localised for Indian users while remaining scientifically accurate.
 7. Reusable across multiple life stages and product surfaces.
-

5.17 Measuring Knowledge Success

Success should not be measured by article views alone.

Instead, evaluate whether knowledge helps users take meaningful action.

Possible measures include:

- Completion of learning paths.
- Increased confidence after reading.
- Better consultation preparedness.
- Reduced repetitive Ask Veda questions.
- Improved adherence to health plans.
- Positive user feedback on usefulness.
- Long-term engagement across life stages.

Knowledge is successful when it supports better decisions, not simply when it is consumed.

5.18 The ParentVeda Knowledge Flywheel

This is the long-term intelligence model for the platform.

Research

Medical Review

Knowledge Objects

Personalisation

Daily Experience

User Interaction

AI Learns Context

Editorial Improvements

Better Knowledge

The system continuously improves without changing the core architecture.

Knowledge becomes richer.

Recommendations become smarter.

The user experience becomes increasingly personalised while remaining grounded in evidence.

Closing Principle

ParentVeda should not become the application with the **most content**.

It should become the application with the **best organised knowledge**.

When users open ParentVeda, they should feel that the platform understands:

- where they are in their journey,
- what they already know,
- what they need next,
- and how to present it in a calm, trustworthy way.

That is what transforms a collection of articles into a true parenting intelligence platform.

Before Part 6

There's one refinement I'd make before we write the final implementation blueprint.

Up to now, we've described **what** ParentVeda should do and **how** it should be structured. However, Claude Code also needs explicit guidance on **how to think** while implementing it.

So instead of a conventional coding prompt, Part 6 should be an **Engineering Constitution**. It should define:

- the product principles Claude must never violate,
- coding standards,
- architectural constraints,
- UX rules,
- state management patterns,
- database conventions,
- testing expectations,
- and phased implementation strategy.

That way, Claude isn't just generating code—it is implementing ParentVeda according to the same philosophy captured throughout Parts 1–5. I think that will produce a much more consistent and production-ready result.

Perfect. This is the final part, and I actually think it is the most important one.

Most people think the last step is:

"Now Claude, build it."

I don't.

After working with Claude Code extensively, I've learned something:

Claude doesn't need more instructions. It needs better constraints.

If you give Claude 5,000 lines of requirements but don't define *how it should think*, it will make hundreds of product decisions on its own.

For ParentVeda, we don't want that.

So Part 6 is not a prompt.

It is the **Engineering Constitution**.

This is the document that Claude must obey while building ParentVeda.

PART 6

ParentVeda Engineering Constitution & Claude Code Master Blueprint

6.1 Mission

You are not building a fertility application.

You are not building a pregnancy application.

You are not building a parenting application.

You are building

ParentVeda — a lifelong family companion that supports people from the decision to become parents through pregnancy, birth, early parenting, and future life stages.

Every engineering decision must reinforce this vision.

6.2 Product Constitution

Before writing any code, every feature must satisfy the following principles.

Principle 1

ParentVeda is one product.

Never design TTC, Pregnancy or Parenting as separate applications.

Everything belongs to one platform.

Principle 2

Life stages change.

Architecture does not.

Switching from TTC to Pregnancy should never require rebuilding navigation, user identity or core services.

Principle 3

Personalisation changes content.

Never navigation.

Never interaction patterns.

Users should never have to relearn ParentVeda when they move to another life stage.

Principle 4

Emotion is part of the product.

Every interaction should reduce anxiety rather than increase it.

Avoid urgency.

Avoid fear.

Avoid unnecessary alerts.

Principle 5

Evidence before opinion.

Medical recommendations should always be traceable to reliable evidence or expert review.

Principle 6

Couple-first where appropriate.

The product should support both partners without reducing the woman's autonomy over her own health data.

6.3 Engineering Philosophy

The implementation should optimise for:

- Readability.
- Maintainability.
- Scalability.
- Testability.
- Reusability.
- Accessibility.

Never optimise only for speed of implementation.

This codebase should still feel coherent five years from now.

6.4 Flutter Architecture

Use a feature-first architecture.

Suggested structure:

```
/lib
  /core
    /design_system
  /theme
  /routing
  /services
  /utils
  /models
  /features
    /today
    /prepare
  /tools
  /calendar
  /community
```

/ask_veda
/journal
/consultations
/commerce
/profile
/shared
/widgets
/components
/animations

Every feature owns:

- UI
- View Models
- Repositories
- Services
- Tests

Shared components live only once.

6.5 State Management

Use Riverpod consistently.

Avoid global mutable state.

Separate:

- UI state
- Domain state
- Network state
- Cached state

No business logic inside widgets.

Widgets should primarily describe presentation.

6.6 Navigation

Use GoRouter.

Navigation should be declarative.

Life-stage transitions should update routes through configuration rather than creating parallel navigation trees.

6.7 Design System

Create one shared design system.

Never duplicate components between TTC, Pregnancy and Parenting.

Examples:

- Cards
- Buttons
- Hero sections
- Empty states
- Loading states
- Bottom sheets
- Dialogs
- Form fields
- Charts

Different content.

Same components.

6.8 Backend Architecture

Supabase remains the primary backend.

Responsibilities include:

- Authentication
- PostgreSQL database
- Realtime
- Storage

- Edge Functions
- Security
- Row Level Security
- Push notification orchestration

Business logic should remain in backend services where appropriate, not duplicated in the client.

6.9 Directus Responsibilities

Directus is the editorial and operational brain.

It should manage:

- Knowledge objects
- Articles
- Daily insights
- Videos
- Courses
- Rituals
- Recipes
- Journal prompts
- Notifications
- Feature flags
- Personalisation rules
- Editorial workflows

Directus is **not** the application backend.

6.10 AI Architecture

Ask Veda should operate through a structured context layer.

Every AI request should include relevant context such as:

- Current life stage
- Journey chapter
- Health conditions

- Active goals
- Recent learning
- Care Circle relationships
- Consultation summaries (where permitted)
- User preferences

AI responses should prioritise explanation, guidance and education.

AI must not diagnose, prescribe medication or replace professional care.

6.11 Database Principles

Design around reusable entities rather than isolated modules.

Examples include:

- Family Journey
- User
- Relationship
- Knowledge Object
- Timeline Event
- Health Record
- Care Circle Member
- Consultation
- Content Presentation

Avoid duplicating concepts across life stages.

6.12 APIs

Design APIs around capabilities instead of screens.

For example:

Avoid:

- `get_today_screen`
- `get_pregnancy_home`

Prefer:

- `get_personalised_daily_experience`
- `get_journey_summary`
- `get_recommended_content`
- `get_care_circle`
- `get_timeline`

This keeps APIs reusable as the product evolves.

6.13 Performance Targets

The application should feel calm and responsive.

Suggested goals:

- Fast cold start.
- Smooth 60 FPS interactions.
- Lazy loading of heavy media.
- Intelligent image caching.
- Offline access to recently viewed content.
- Graceful handling of slow networks.

Performance should be measured, not assumed.

6.14 Accessibility

Accessibility is a core requirement.

Support:

- Dynamic text scaling.
- Screen readers.
- High contrast where appropriate.
- Clear focus order.
- Semantic labelling.
- Large touch targets.
- Readable typography.

- Colour-independent status indicators.

Accessibility should be validated throughout development rather than added later.

6.15 Security

Security is fundamental.

Requirements include:

- Row Level Security on all user data.
 - Secure authentication.
 - Encryption of sensitive records.
 - Audit logging for protected health information.
 - Fine-grained sharing permissions.
 - Secure file storage.
 - Data deletion workflows.
 - Compliance with applicable health-data regulations in target markets.
-

6.16 Testing Strategy

Every feature should include:

- Unit tests for business logic.
- Widget tests for reusable UI.
- Integration tests for critical flows.
- End-to-end tests for major user journeys.

Critical flows include:

- Registration.
 - Partner invitation.
 - TTC setup.
 - Transition to Pregnancy.
 - Consultation booking.
 - Ask Veda interactions.
 - Timeline continuity.
-

6.17 Release Strategy

Implement the product incrementally.

Suggested phases:

Phase 1

Platform foundations:

- Authentication
 - Design system
 - Journey Engine
 - Navigation
 - Today
 - Calendar
-

Phase 2

Core TTC experience:

- Cycle Companion
 - Knowledge Engine
 - Journal
 - Daily Journey
 - Personalisation
-

Phase 3

Partner ecosystem:

- Partner Mode
 - Care Circle
 - Community
 - Consultations
-

Phase 4

AI & Intelligence:

- Ask Veda
 - Recommendations
 - Learning paths
 - Context engine
-

Phase 5

Advanced capabilities:

- Commerce
 - Analytics
 - Referrals
 - Future life stages
-

6.18 Code Review Checklist

Every pull request should answer:

- Does this follow ParentVeda design principles?
- Does it introduce duplicate concepts?
- Can this be reused across life stages?
- Is it testable?
- Is it accessible?
- Does it maintain privacy?
- Does it improve clarity?
- Does it preserve the calm experience?

If the answer to any is "no", the change should be reconsidered.

6.19 Definition of Done

A feature is complete only when it:

- Meets the product specification.
- Is medically and editorially compatible where applicable.
- Includes tests.

- Includes analytics instrumentation.
- Meets accessibility standards.
- Supports localisation.
- Performs acceptably on target devices.
- Integrates with the Journey Engine.
- Respects user privacy.

Coding alone does not make a feature complete.

6.20 The Final Instruction to Claude

Before implementing any feature, ask:

"Does this strengthen ParentVeda as a lifelong family companion, or does it solve only today's problem?"

If it solves only today's problem, redesign it.

Choose solutions that will still make sense when ParentVeda includes future life stages such as Birth & Recovery, School Years, and beyond.

Every implementation should contribute to a platform that grows with families over time.

Closing Statement

ParentVeda should not aim to become the application with the greatest number of features.

It should aim to become the application that families trust the most during one of the most meaningful journeys of their lives.

Technology, AI, design, content, and engineering are all in service of that trust.

The platform succeeds not because it predicts ovulation more accurately or displays more charts, but because it helps families feel informed, supported, and cared for—from the decision to have a child through the years that follow.

One final recommendation

Having now written all six parts, I would make one significant improvement before giving this to Claude Code.

At the moment, this document is an excellent **product strategy and architecture reference**, but it is **not yet a build specification**.

If I were leading this project, I would add **three appendices** that sit after Part 6:

1. **Appendix A – Complete Screen Inventory & Navigation Map**
Every screen, modal, bottom sheet, empty state, onboarding flow, and transition. This becomes the definitive UX map.
2. **Appendix B – Supabase Schema & Directus Collections**
Every table, field, relationship, Row Level Security policy, storage bucket, Edge Function, and Directus collection. This becomes the implementation contract between product and engineering.
3. **Appendix C – Flutter Component Library & Design Tokens**
Every reusable component, typography scale, spacing system, colour tokens, animation guidelines, iconography, and state definitions. This ensures TTC, Pregnancy, Parenting, and future life stages all feel like one cohesive product.

Those appendices would elevate this from a strong conceptual blueprint into a **production-ready product specification** that a team could implement with much less interpretation. In my view, that would be the final step before handing it to Claude Code.

I actually spent a few minutes thinking about this before answering, because I didn't want to say "it's complete" if I genuinely believed something important was missing.

My answer is:

The document is about 90–92% complete as a Product & Architecture Bible.

The remaining 8–10% isn't more features. It's **depth in a few critical areas** that will make the difference between a good app and a world-class product.

I wouldn't rewrite anything. I'd add **7 appendices**.

These are the pieces I think are still missing.

1. The Journey Engine (Highest Priority

This is the one thing I think deserves its own document.

Not database.

Not UI.

The **decision engine**.

For example,

User

Current Stage = TTC

Cycle Day = 12

Has PCOS

Partner Joined

Low Vitamin D

Consultation Tomorrow

Mood = Anxious

Now answer

What should ParentVeda show today?

Everything.

Hero.

Today's Learn.

Nutrition.

Exercise.

Ask Veda prompt.

Journal.

Community.

Products.

Doctor tip.

Notifications.

Partner mission.

This engine is the heart of ParentVeda.

If I were building this, I'd probably spend **30–40 pages** designing just this engine.

2. The Recommendation Engine

Not AI.

Recommendation.

Different thing.

Every recommendation should answer

WHY.

Example

Instead of

Take Vitamin D.

Show

Recommended because:

- Your last report showed low Vitamin D
- You're trying to conceive
- Your doctor also recommended supplementation

That builds trust.

I'd design

- Recommendation priorities
- Recommendation scoring
- Recommendation conflicts
- Expiry
- Confidence
- Sources

3. The Transition Engine

I actually think this deserves a document by itself.

Examples

Trying Naturally

↓

Positive Pregnancy

↓

Pregnancy
Pregnancy

Birth

Recovery
Recovery

Parenting

Nothing should break.

This is surprisingly hard to design well.

4. The AI Constitution

I think Ask Veda deserves its own specification.

Not architecture.

Behaviour.

Things like:

When should AI answer?

When should AI refuse?

When should AI escalate?

When should AI recommend a doctor?

When should AI ask follow-up questions?

How should AI explain uncertainty?

What tone should AI use?

How should AI personalise responses?

When should AI surface research?

How should AI summarise consultations?

How should AI remember context?

This alone could easily become a 25-page document.

5. The Design System Bible ★★★★★

Not UI.

System.

Things like

- Cards
- Elevation
- Shadows
- Motion
- Empty states
- Hero behaviour
- Page transitions
- Micro animations
- Bottom sheets
- Dialogs
- Typography
- Spacing
- Icon language

Then every future module automatically looks like ParentVeda.

6. The Gamification Rules (Actually... Anti-Gamification) ★★★★★☆

I think ParentVeda needs a document saying

What we will NEVER do.

Examples

No streak anxiety.

No guilt.

No red warning colours unless medically necessary.

No "You're behind."

No "You missed your fertile day."

No comparison.

No ranking.

No points.

No XP.

No "perfect parent."

That document protects the brand forever.

7. The Product Principles Bible

This is the one I would definitely add.

I would write around **100 product principles**.

Examples

Instead of

Show more information.

Principle

Always explain before asking users to act.

Instead of

Add a notification.

Principle

Never interrupt a user unless the interruption provides more value than remaining silent.

Instead of

Show analytics.

Principle

Analytics should create confidence, never obsession.

Instead of

Show recommendations.

Principle

Every recommendation must answer "Why am I seeing this?"

Instead of

Ask users to log everything.

Principle

Never ask users to provide information unless ParentVeda can use it to improve their experience.

I honestly think this document would become the soul of ParentVeda.

One feature I think is missing

Only one.

And I think it's a big one.

Family Timeline

Not Timeline.

Family Timeline.

Imagine this.

January 2028

"We decided we wanted a baby."

Week 12

↓

Baby's First Kick

Birth

First Smile

First Word

Started School

One continuous life story.

Not TTC.

Not Pregnancy.

Not Parenting.

Family.

I don't think any parenting platform has done this beautifully.

I think ParentVeda should.

And finally...

There's one thing I intentionally did **not** include in the previous six parts because I wasn't sure whether you wanted to position ParentVeda this way.

After spending months discussing the product with you, I think this is the biggest opportunity.

I don't think ParentVeda should market itself as:

- A Pregnancy App.

- A Parenting App.
- A TTC App.

I think it should market itself as:

The Family Operating System.

That isn't a feature.

It's a philosophy.

Everything you've built naturally fits into it:

- TTC
- Pregnancy
- Birth & Recovery
- Parenting
- Father Mode
- Care Circle
- Ask Veda
- Community
- Experts
- Knowledge
- Journal
- Timeline
- Referrals
- AI

They all become capabilities of one operating system that supports families through their journey.

My overall assessment

If I were joining ParentVeda as your Chief Product Officer, I would sign off on the six-part document as the **foundational product specification**.

The only additions I'd insist on before engineering begins are:

1. **Journey Engine Specification** (highest priority)
2. **AI Constitution**
3. **Transition Engine**
4. **Product Principles Bible**
5. **Family Timeline Specification**

Those five documents don't replace what you've written—they make the platform much harder to imitate because they define the decision-making philosophy behind it, not just the features. That's where long-term product differentiation usually comes from.
