

Today & Weekly Journey

ParentVeda Pregnancy App - Feature & Screen Reference

PDF 2 of 7

The daily home (Warm Nest) and the week-by-week pregnancy journey, including the V2 weekly flow, baby size views, and weekly reads and videos.

Feature & Screen Reference for review and testing.
Generated 10 July 2026.

- Screen: Read Next & Daily Reads (read_next_screen.dart) 14

Overview

"Today & Weekly Journey" is the daily home a mother lands on plus the week-by-week pregnancy experience it opens into. The bottom navigation "Today" tab (first tab) shows the Warm Nest daily home (`home_screen_b.dart`); its purple gradient hero card is the doorway into the weekly journey. Tapping the hero opens the Weekly Card Stack shell (`weekly_card_stack_screen.dart`), which now renders every week (4 to 40) as the vertical "Weekly Flow V2" (`week_flow_screen.dart`) with a fixed week strip, a collapsing trimester/progress header, and per-week content. Core concepts a tester should hold: pregnancy is tracked as weeks 4 to 40 (280 days) grouped into three trimesters; the app derives the current week/day from a due date; when no real due date is saved the app defaults to a week-20 "halfway" placeholder; and each week presents a selectable baby "size view" (Fruit vs Baby comparison). The Weekly Flow was formerly toggled between a "Classic" swipe carousel and a "New" (V2) vertical flow; that Classic/New toggle is now removed and V2 is the only weekly view (the classic carousel code is parked for revert). All week content is bilingual English + Hindi (Hinglish), stored as `{en, hi}` `LocalizedString`; the in-app English/Hindi toggle is currently hidden but the machinery is intact. Daily content is authored per week and gracefully falls back when a day is not yet authored. A testing-only Mom | Dad switch re-skins these screens into the father (Slate) preview.

Screens covered:

- `home_screen_b.dart` - the current Warm Nest "Today" home (Daily Moment)
- `home_screen.dart` - the older six-module daily home (legacy, no longer wired)
- `home_detail_screens.dart` - reader / story / talk-composer surfaces opened from the daily modules
- `weekly_card_stack_screen.dart` - the weekly journey shell (header, week strip, hosts the flow)
- `week_flow_screen.dart` - Weekly Flow V2, the vertical week sections and full-screen popups
- `week6_preview_screen.dart` - a static week-6 design prototype (not wired into the app)
- `watch_learn_screen.dart` - Today's Video card + the Watch & Learn video screen
- `read_next_screen.dart` - Read Next discovery, the Daily Reads home card, and the reader

Screen: Warm Nest Today Home (home_screen_b.dart)

Status: Live - this is the mother's Home/"Today" tab, wired in main_scaffold.dart (HomeScreenB(pregnancy, home) at tab index 0). It replaced the older home_screen.dart (kept for revert). **Reached from:** Bottom-nav "Today" tab (first tab). It is the app's landing screen for the mother. **Purpose:** A warm daily briefing that gathers the day's rituals, this-week snapshot, and shortcuts into one scroll, and acts as the doorway into the weekly journey.

Sections & UI (top to bottom in a scrolling list):

- **Brand header** - ParentVeda logo/wordmark, plus three round buttons: a Saved/bookmark hub (opens SavedHubScreen), a Search icon (opens the global search sheet), and a gradient avatar showing the mother's initial (opens ProfileScreen; there is no separate Profile tab in this layout).
- **Post-Pregnancy doorway** - a coral/purple gradient banner "Post-Pregnancy / Baby's arrived? Step into the parenting app" that pushes the parenting app's My Child screen. This is a temporary preview doorway (the "40 weeks complete" hand-off is not wired yet).
- **Weekly Snapshot eyebrow + gradient hero card** - a purple gradient hero showing: a time-based greeting with the mother's name, "Week N - Day D", a one-to-two-line "this week" brief (the week headline, falling back to the reveal line), a "View week / open week" chevron affordance, and a circular progress ring showing percent complete plus a "weeks to go" line. Below a divider, three glassy shortcuts sit inside the hero: **Baby**, **Mother**, and **What's next**.
- **"Today's Journey" heading** - a sun icon plus the section title, under which all daily items live.
- **Today's Video card** - TodaysVideoCard (the week's recommended Watch & Learn pick; see the Watch & Learn screen).
- **Grow module** - the day's parenting insight (GrowModule).
- **Daily Garbh Sanskar** - a card listing the four live pillars, each with today's single rotating item: Shravan (listen), Vichara (thought), Samvad (speak), Kriya (action). Shows an N/5 done count and a streak. (Ahara/nourishment is commented out; the "5" goal is retained.)
- **Scans & appointments (due now)** - a teal card listing scans due around the current week (anchor week within a window) that are not yet completed, plus any upcoming saved appointments; each scan has an "Already done" button, and a "View all scans" link.
- **Trimester chart card** - TrimesterChartCard, a quick "where am I" reference.
- **My Journal (daily)** - four quick-entry tiles (Write memory, Note for baby, Add photo, Record voice) and a "View My Journal Timeline" link; all entries flow into the full JournalScreen.
- **Medication & supplements (daily)** - inline list of today's meds with a tick-to-take toggle; a bell action adds a personal reminder; her self-set reminders render below with edit/delete.
- **Daily Reads card** - DailyReadsHomeCard (rotating articles + books with a done tick; see Read Next).
- **Today's product recommendation** - a horizontal carousel of product cards (real photo, optional affiliate badge, name, price) that rotate by day; taps open the product page, and "See all" opens ProductsScreen.

Features & interactions:

- Tapping the hero card sets the selected week to the current week and pushes weeklyCardStackScreen (the weekly journey). The hero "Baby", "Mother", and "What's next" shortcuts open the respective week detail popups directly (baby detail, mother detail, and the What's Next popup) without leaving Home.

- The progress ring and greeting are computed live: greeting varies by hour, progress is `currentDay / 280`, weeks-to-go is `40 - week`.
- Garbh Sanskar pillar rows each push their pillar screen in daily: `true` mode; done state and streak come from `GarbhStore`.
- Scan "Already done" calls `ScansStore.markCompleted` (also drops a journal entry); the list is driven by `scansDueAt(currentWeek)` filtered by completion.
- Medication tick calls `MedicineStore.toggleToday`; reminders are `ReminderStore` items edited via a reminder editor sheet.
- Journal tiles open text/photo/voice composers that save into the journal; the daily reads and product cards deep-link into their readers/pages.
- A number of older building blocks are present but commented out or parked for revert: a Daily/Weekly flow toggle, a standalone "rituals" strip (`_ritualsSection` opening `Grow/Read/Talk/GarbhSanskar/Nurture` modules in a draggable sheet), an affirmation card, and the "Read to your baby" `ReadModule` (folded into Garbh Sanskar's `Samvad`).
- The active day can be a preview day (`home.previewDay`) for content review, otherwise the real `pregnancy.currentDay`.

Data: `PregnancyController` (`week/day/progress`, names, language), `HomeContentController` (`dayFor`, `previewDay`, engagement), `HomeDay/GrowContent/etc.` from `lib/data/home/week_*.json` (bilingual), `WeekContent.snapshot` from `weekContent.json` for the hero brief, `GarbhStore`, `ScansStore` + `scan_schedule.dart`, `MedicineStore` + `ReminderStore`, `product_data.dart`. All text is English + Hindi via `LocalizedString`.

Screen: Older Daily Home (`home_screen.dart`)

Status: Legacy / no longer wired - HomeScreen is not referenced by `main_scaffold.dart` (the mother now gets HomeScreenB, and the father gets FatherDailyScreen). It is kept intact in the codebase (it still imports and can delegate to FatherHomeScreen and ReadNextHomeCard) but is effectively unused in the shipping navigation. Treat it as a reference/earlier version. **Reached from:** Not reachable through current navigation. (Historically it was the Home tab.) **Purpose:** The original "Daily Moment" - a calm 4 to 6 minute arc of six modules rather than a dashboard.

Sections & UI:

- A `ModeToggle` (Mom/Dad) at the top; in father mode it returns `FatherHomeScreen`.
- A prototype `_PreviewBar` for stepping across days/weeks (buttons for +/- 1 day and +/- 7 days, a "today" reset, and a label flagging when the shown day is a not-yet-authored fallback).
- `HomeHeader` (greeting, week, snapshot, baby-learning, language toggle), `MomentSummary`, then the six daily modules in order: **Grow**, **Read (Read To Your Baby)**, **Talk (Talk To Your Baby)**, **Garbh Sanskar**, **A Moment For You (Nurture)**, and, from week 28+, **Baby Movement** (`MovementModule`).
- A `ReadNextHomeCard`, a `CompletionBanner`, and an `EmotionalCheckIn` at the end.

Features & interactions: The preview bar calls `home.setPreviewDay(...)`. The modules are the same widgets reused by the new home. Movement check-in appears only when `day.showsMovementCheckIn` (week ≥ 28). This screen carries the note "Remove before launch" on the preview bar.

Data: Same as the Warm Nest home - `PregnancyController`, `HomeContentController`, `FatherContentController`, `HomeDay` content (English + Hindi).

Screen: Home Detail Screens (`home_detail_screens.dart`)

Status: Live - these are the reading/composing surfaces opened from the daily modules (Grow, Read, Talk) and the Garbh Sanskar info button. They are reached indirectly, not from a tab. **Reached from:** The daily modules (`home_modules.dart`) on the Home screen open these: the Grow module's "Read more" opens `GrowReaderScreen`; the Read module opens `StoryReaderScreen`; the Talk module opens `TalkComposerScreen`; the Garbh module's "i" opens `showGarbhInfoSheet`. A father lesson variant (`FatherLearnReaderScreen`) exists for the father app. **Purpose:** Full-text reading and message composition surfaces that back the daily moment.

Sections & UI:

- `GrowReaderScreen` - a full-page read of the day's parenting insight: quoted title, insight, expanded body, an optional "Deep dive" box (research/expert note, shown only when present), and a "Remember" gradient card.
- `FatherLearnReaderScreen` - the father equivalent (module label, title, insight, expanded, optional deep dive, remember) in the Slate palette.
- `StoryReaderScreen` - the "Read To Your Baby" story: quoted title, summary, and paragraphs. If the story allows audio, a "Listen" action in the app bar plays narration via `BabyVoiceService` (always narrates the English text because TTS cannot read Roman-script Hinglish, even when the UI is in Hindi).
- `TalkComposerScreen` - write or speak a message that saves into "Dear Baby": shows the prompt and its motivation, a full-height text field, and a mic button that dictates speech into the field via `speech_to_text`. Can auto-start with the mic (`startWithVoice`). Saving stores the entry in `DailyStore` (tagged as spoken if voice was used) and shows a confirmation.
- `showGarbhInfoSheet` - a draggable bottom sheet explaining a Garbh Sanskar ritual: "Why it matters" and "How to use it", with a "Got it" button.

Features & interactions: Audio play/stop toggles per card key; microphone permission is requested and a snackbar warns if unavailable; the composer pre-loads any existing message for the day. All are bilingual in UI text (English + Hindi), with narration forced to English audio.

Data: `GrowContent`, `ReadStory`, `TalkPrompt`, `GarbhSanskarDaily` (from `HomeDay`), `FatherLesson` (father), `DailyStore` (saved talk messages), `BabyVoiceService` (TTS), `speech_to_text` (dictation).

Screen: Weekly Card Stack (`weekly_card_stack_screen.dart`)

Status: Live - the weekly journey shell. For the mother it is pushed from the Today home hero; for the father it is the "Journey" tab (tab index 1). It hosts the Weekly Flow V2 body. **Reached from:** Mother: tap the Today home hero card (or its Baby/Mother/What's next shortcuts open the popups directly). Father: the "Journey" bottom-nav tab. Also reachable via `AppNav.goWeekly`. **Purpose:** The frame around the per-week experience - app bar, a collapsing trimester/progress header, a scrollable week strip, and the week's content.

Sections & UI:

- **App bar** - ParentVeda logo/wordmark; a "< Daily" pill that hops back to the Today (Daily) tab (`AppNav.goToday`); and a round mute/unmute speaker button for the baby-voice narration (`BabyVoiceService`, journey scope). The English/Hindi language toggle (`_LanguageToggle`) is present in code but commented out (hidden for now).
- **Collapsing header** (`_WeekHeaderDelegate`) - a pinned compact row showing the trimester name, a "weeks to go" count, a purple progress bar, and "Week N - date range"; beneath it a collapsible week-dot strip that fades/shrinks as you scroll.
- **Week strip** (`_WeekBar`) - a horizontally scrollable single row of all weeks; the selected week is a filled purple disc (Slate in father mode), the current week gets a small accent dot, locked future weeks are greyed. Tapping a week selects it and auto-centers.
- **Body** - for an unlocked week it renders `WeekFlowView` (the V2 vertical flow). Week 40 appends a full-screen celebration finale (`CelebrationCard`, the keepsake booklet) at the bottom of the flow. Locked weeks render a `LockedWeekView` panel instead. Loading and error states are handled (spinner; a retry error state).

Features & interactions:

- Switching weeks snaps content back to the top and stops any playing baby voice; leaving the screen stops narration.
- Baby-voice can be muted/unmuted for the journey scope; the classic carousel had auto-play of the size-reveal and baby-update narration (that swipe carousel, `_pagerBody/_WeekStrip/dots`, is parked/commented for revert now that V2 is the only view).
- With `unlockAllWeeks` on (default true in the controller), no week is locked, so the whole 4 to 40 journey including the week-40 finale is reviewable.
- A testing Mom | Dad switch (`FatherPreview`) re-skins the whole shell into the Slate father look live.

Data: `PregnancyController` (`selectedWeek`, `availableWeeks`, `weekDates`, `isLocked`, `currentWeek`), `WeekContent` per week from `weekContent.json`, `BabyVoiceService`, `FatherPreview`, `buildWeekCards/CelebrationCard`. Bilingual English + Hindi throughout.

Screen: Weekly Flow V2 (`week_flow_screen.dart`)

Status: Live - `WeekFlowView` is now the only weekly view, used for every week (4 to 40). The former Classic swipe carousel and the Classic/New toggle are removed from the UI (parked for revert). Week-20 content is the richest and is used as the fallback voice for the father preview; other weeks fall back to their per-week `WeekContent`. Several data blocks (facts, foods, videos) are curated in Dart and are prototype content. **Reached from:** Rendered as the body of `WeeklyCardStackScreen` for the selected week.

Purpose: Re-flows a week as one vertical scroll of section "briefs"; tapping a brief opens a full-screen, descriptive popup (tabs/carousels/cards).

Sections & UI (ordered down the scroll):

- **S1 Size hero** (`WeekSizeHero`) - the "how big am I" hero: a circular progress ring (progress = week/40) around the comparison figure, a top milestone pill, a **selectable size view**, and three stat cards (**SIZE, LENGTH, WEIGHT**). The size view is a two-option segmented control offering exactly **Baby** and **Fruit** (no "everyday object" or "hand" options exist). It is backed by `SizeViewPref` (a single global boolean persisted in shared preferences under `size_baby_mode`; default is **Fruit**). In Baby mode it shows a real photo `assets/baby/week_NN.jpg` (falls back to the fruit emoji figure if that asset is missing); in Fruit mode it shows a food emoji. The size data (fruit, length, weight, milestone) comes from `WeekContent.snapshot` in `WeekContent.json`, bilingual. (The week-6 static prototype shows the same Fruit/Baby toggle idea.)
- **S2 Weekly video** (`WeekVideoCard`) - the week's featured video tile: a 16:9 gradient placeholder thumbnail (no real media), a bookmark/save toggle (`VideoStore`), and a "why now" line. Tapping the thumbnail shows a "coming soon" snackbar - playback is not wired.
- **S3 About baby brief** - a `_SectionBrief` ("About your baby") showing `development.whatImDoing`; tap opens the **Baby Science popup** (`_BabyDetailScreen`).
- **S4 For you, mum brief** - a `_SectionBrief` showing `mom.emotionalState`; tap opens the **Mother detail popup** (`_MotherDetailScreen`). In father preview the title becomes "How she's doing".
- **S5 What's next brief** - a `_SectionBrief`; tap opens the **What's Next popup** (`_WhatsNextScreen`).
- **Daily moment bridge** (`_DailyMomentBridge`) - a subtle inline "your daily moment is waiting" link woven mid-flow that jumps back to the Today tab.
- **S6 This week's videos** (`_VideoFeed`) - a horizontal reels/shorts-style feed of vertical tiles built from a hardcoded list; every tile is a gradient placeholder with an always-on "NEW" badge and a placeholder duration. Taps show a "coming soon" snackbar (no real video).
- **This week's reads** (`_ArticleFeed`) - an articles carousel below the videos, shared by mother and father; it hides itself when the week has no articles. Tapping a card opens a full-screen `_ArticleReader` that splits the article body into paragraphs.
- **S6.5 Trimester tips** (`_TrimesterTips`) - three tips for the current trimester; tapping a tip opens a popup.
- **S7 Share with partner** (`_PartnerSection`) - a share card (hidden in father mode). Week 40 also appends the celebration finale passed in as trailing.

Full-screen popups and their interactions:

- **Baby Science popup** (`_BabyDetailScreen`) - opens from the "About baby" brief. It is one scrolling page: an "About your baby" article read (headings + body, with inline image/video placeholder frames where video frames tap to a "coming soon" snackbar), then a "Baby science" heading (`wfBabyScience`) with the "did you know" facts as vertical tap-to-read rows (emoji, title, two-line teaser); tapping a fact

opens a centered dialog with the full fact. Content is bilingual (`_babyArticle` + `_babyScience`, with father-voiced variants in the preview).

- **Mother detail popup** (`_MotherDetailScreen`) - opens from the "For you, mum" brief. It has two top toggles (no swipe): **"You this week"** (index 0) and **"Health this week"** (index 1). The Health section has its own sub-toggle: **Symptoms** (0) and **Diet** (1). "You this week" is a woven article read (with inline image/video placeholder frames) plus this-week topic cards (each opening a centered dialog), a self-care tip, and a reassurance card, drawn from mom data and the curated `_motherTopics/_motherArticle` (with father-voiced variants for the preview). The **Symptoms** sub-tab lists common trimester symptoms; tapping one opens a draggable sheet (How common / Why / What helps / When to see a doctor). The **Diet** sub-tab ("Eat") shows the week's superfood, foods to favour, and foods to avoid. There is no separate "To-do" tab here - the old Actions/to-do cards were moved into the Trimester Tips section. In father preview only the "Her this week" read shows (no Health tab, since symptoms/diet are the mother's own voice).
- **What's Next popup** (`_WhatsNextScreen`) - opens from the "What's next" brief (and from the Home hero "What's next" shortcut). It is one page with a three-way tab row: **Scans (default, index 0)**, **For you (index 1)**, and **Milestones (index 2)**. The Scans tab lists week-relevant scans and appointments (tappable, from `kJourneyMilestones` medical items within a window around the current week) opening a scan detail dialog; the For you tab is a forward look at the next few weeks for the mother (physical-changes teaser per week, tap opens a Body/Feel/self-care dialog); the Milestones tab lists happy per-week milestones (from `_weekMilestones`), each opening a centered detail popup. In the father preview the What's Next popup collapses to a re-voiced Scans-and-appointments-only view with a "how to show up" help block.
- **Trimester tip popup** and **milestone/scan detail popups** open as centered dialogs from their lists.
- **Article reader** (`_ArticleReader`) - opens a full "This week's reads" article; the article feed is driven by `weekArticlesFor(week)`.
- **Partner share** (`_PartnerSection`) - composes a share message (scan reminders + partner-help lines) and shares it via the system share sheet (`share_plus`).

Features & interactions:

- There is no baby-voice narration or audio playback inside this vertical flow (audio lives in the weekly shell's mute button context and in the story reader, not in `WeekFlowView`). The word "voice" in this file refers to editorial tone (father re-voicing), not TTS.
- Tapping section briefs pushes full-screen popups (`_PopupScaffold`, close X in the app bar); popups use in-page toggles rather than swipe (`setState`, no `PageView`).
- The Baby/Fruit size toggle writes to `SizeViewPref` (global, persisted) and updates the hero live; the weekly video bookmark toggles `VideoStore`.
- The "daily moment bridge" jumps to the Today (Daily) tab; the "< Daily" hop in the shell app bar keeps the daily<->weekly loop two-way.
- Sharing (S7) uses the system share sheet (`share_plus`) with an assembled bilingual partner message; a failure shows a snackbar.
- **Father (Dad-preview) re-skin:** `_fatherSkin(week)` applies the Slate palette on every week; `_fatherWeek(week)` (true only on week 20 while the Dad switch is on) swaps in re-voiced, partner-facing copy. Per-week father briefs exist (`_fBabyBriefs`, `_fMotherBriefs`) for weeks 4 to 40; where a week is not yet re-voiced, the mother's per-week content shows in the Slate skin. This is a testing preview to be stripped before launch.

Data: WeekContent (weekContent.json, bilingual), curated Dart constants in this file (baby-science facts, foods to eat/avoid, to-dos, week videos, milestones, mother topics, partner-help lines), journey_milestones.dart/kJourneyMilestones, symptom_data.dart, trimester_tips.dart, week_articles_data.dart (weekArticlesFor), SizeViewPref, BabyVoiceService, FatherPreview, AppNav, share_plus. All primary content is English + Hindi; the "This week's reads" articles are currently English-only prototype text (week 20 and week 21 seeded).

Screen: Week 6 Design Preview (`week6_preview_screen.dart`)

Status: Prototype / Preview - explicitly a temporary, self-contained visual mockup wired for week 6 only. It is not hooked into the real card-stack flow (all values are hard-coded and its buttons are inert). It is only shown if `main.dart` is pointed at it instead of the real home. Treat everything here as static. **Reached from:** Not in normal navigation - only by manually pointing the app's home: at `Week6PreviewScreen`. **Purpose:** To preview how a proposed week home layout looks, using week-6 numbers (pomegranate seed, 4 to 6 mm, under 1 g).

Sections & UI:

- A top bar (logo, static "EN" pill, "Week 6 of 40"), a "Trimester 1" progress bar (15%), a hard-coded "12 - 18 FEB" date range, and a week strip of 4,5,[6],7,8 with 6 selected.
- A **Size card** ("How big am I?") with a milestone pill ("THE BEATING HEART"), a decorative seed halo, a **FRUIT / BABY** toggle (visual only), the "a pomegranate seed" label, LENGTH and WEIGHT metric tiles, and a week-6 headline plus a first-person baby line.
- An **Upcoming Milestones** timeline (weeks 7, 8, 12) with a "VIEW FULL TIMELINE" button, a **Daily Read** card ("Surviving Morning Sickness"), page dots, and a bottom nav (MAIN/LIST/COUNTERS/SETTINGS).

Features & interactions: None are functional - the FRUIT/BABY toggle, "VIEW FULL TIMELINE", nav, and dots are static. This is purely a look-and-feel prototype.

Data: All values are hard-coded in Dart (no controller/JSON binding). Text is English only.

Screen: Watch & Learn / Today's Video (`watch_learn_screen.dart`)

Status: Live UI, mock playback - the cards and screen are live, but real video playback is not wired: opening a video shows a calm detail sheet with a "coming soon" note. Thumbnails are gradient placeholders (no real media yet). **Reached from:** `TodayVideoCard` sits on the Today home (below the hero). Its "More videos" link and the Today video both open into the full `WatchLearnScreen`. `WeekVideoCard/_VideoFeed` in the weekly flow surface videos too. **Purpose:** Contextual learning videos - "the right video at the right time", not a general library.

Sections & UI:

- **Today's Video card** (Home) - shows the week's recommended video: gradient thumbnail with a play glyph and duration chip, title, a "Why now" reason line, a "Watch" button, and a bookmark/save toggle.
- **Watch & Learn screen** - horizontal-scrolling rails by category: **Recommended, Learn a Skill, Expert Explains, Birth Prep, Newborn Prep**, and **Saved**. Each rail is filtered to videos matching the current week; empty rails hide themselves. Cards show a thumbnail, title, and reason.
- **Video detail sheet** - a bottom sheet with a large thumbnail, title, duration, a "Why now" reason, a "coming soon" playback note, and a Save/Saved toggle.

Features & interactions: Tapping a card or "Watch" opens the detail sheet (no actual playback). Bookmarking toggles `VideoStore.toggle(id)`; saved videos appear in the "Saved" rail and drive the card's bookmark state. The recommended pick is chosen by `matchesWeek`, falling back to the nearest-week recommended video.

Data: `PvVideo` items in `kVideos` (`pv_video.dart`), each bilingual (English + Hindi) with a title, "why now" reason, duration, category, and week range; `VideoStore` for saved state; category colors/icons from `kVideoMeta`. All durations/reasons are authored metadata; `videoUrl` playback is a later addition.

Screen: Read Next & Daily Reads (`read_next_screen.dart`)

Status: Live - reading discovery and the reader are functional. Book "Buy now" is a "coming soon" snackbar (mock commerce); article bodies and status tracking are real. **Reached from:** The **Daily Reads** card (`DailyReadsHomeCard`) and, in the legacy home, the **Read Next** card (`ReadNextHomeCard`) sit on Home; both push the full `ReadNextScreen`. Individual items open `ReadItemScreen`. **Purpose:** A week-aware reading feed where recommendations are primary and every item explains "why this matters now".

Sections & UI:

- `ReadNextScreen` - a subtitle, a hero "This Week's Pick" card (emoji, title, category, reading time, a gold "Why now" box, "Read now"), then sections that appear when non-empty: **Recommended** (this week), **Looking ahead** (with a "coming up in week N" label), **Books** (a horizontal rail of book cards), **Research** (simplified), **Experts** (recommended-by cards), and **Saved**. A search icon opens a `SearchDelegate` over the reading catalog.
- `DailyReadsHomeCard` (Home) - a gradient-header card titled from `drTitle` with an **Articles** group (day-rotating) and a **Books** group; each row has an emoji thumbnail (category-tinted), title, category/reading-time (or rating/author for books), a done tick when completed, and a save heart; a "See all" link opens `ReadNextScreen`.
- `ReadNextHomeCard` (legacy home) - a compact "This Week's Pick" entry with "Read now" and "More reading".
- `ReadItemScreen` (reader) - centered emoji, title, author/category, the "Why now" box, an optional "recommended by" line, then either the article body (split into paragraphs) or a "why we recommend" card for books. Bottom actions: "Mark reading" (toggles a gold "reading" status) and "Mark done"/"Completed".

Features & interactions:

- Save/heart toggles `ReadNextStore.toggleSave`; saved items surface in the Saved section and the Profile saved hub.
- Status: "Mark reading" sets reading; "Mark done" toggles `ReadDoneStore` and sets/clears completed in `ReadNextStore` - completed and reading are mutually exclusive, and marking done in the reader also ticks the Home daily-reads checkbox (shared `ReadDoneStore`).
- Book "Buy now" shows a "coming soon" snackbar; "Know more" opens the item.
- Search runs `readSearch(query)` and opens results in the reader.
- Recommendations are computed from the current week: `heroForWeek`, `recommendedForWeek`, `lookingAhead`, and `readByType` for books/research/experts; daily reads use `dailyArticleReads(week, day)` and `dailyBookReads(day)`.

Data: `ReadItem` records from `read_next_data.dart` (title, emoji, category, reading time, "why now" reason, body, author/role, rating), `ReadNextStore` (saved + reading/completed status), `ReadDoneStore` (done ticks). Item metadata reasons are shown as "why now"; note the reading catalog text is largely English (the reader UI labels follow the selected language).
