

Prepare, Community, Calendar & Shop

ParentVeda Pregnancy App - Feature & Screen Reference

PDF 6 of 7

The Prepare commerce tab (masterclasses, consults, cohorts, yoga, birthing classes), plus the community feed, the calendar, and the product shop.

Feature & Screen Reference for review and testing.
Generated 10 July 2026.

Overview

Prepare is the mother-side commerce hub. It is the second tab in the floating bottom nav (a graduation-cap "school" icon labelled "Prepare"), sitting between Today and Tools. It replaced the old Journey tab in the bottom bar (the weekly stack is now reached from the Home hero and Tools). The Prepare tab opens a hub screen that routes into five paid sections: **Masterclasses** (deep-dive live expert sessions), **1:1 Consultations** (private video calls with five specialists), **Cohort Programs** (small guided group programmes), **Prenatal Yoga** (a trimester-safe movement program), and **Birthing Classes** (a six-class course for the big day). Each section has a list screen and, where relevant, a detail screen; masterclass intros, yoga sessions and birthing classes all "play" into one shared placeholder video screen.

Crucially, **all Prepare commerce is a mock**. No payment gateway is wired. A booking sheet reserves a spot, persists an id to local storage (PrepareStore via SharedPreferences), and flips the button to a "booked" state, but explicitly tells the user "Payments aren't live yet - nothing is charged now." The video player shows a "Video coming soon" placeholder. All content is static, hardcoded to the "Priya, 30 weeks, third trimester" persona.

This PDF also covers three sibling clusters documented in a companion file: **Community** (a social feed tab, the fifth bottom-nav tab, groups icon; plus per-author profile pages and the ExpertFollowStore follow-experts feature - note that following is a Community feature and is NOT used inside Prepare), **Calendar** (the fourth bottom-nav tab, a pregnancy calendar), and the **Shop/Cart** (a product marketplace reached from Tools, Home, global search, Ask Veda, and checklist tools, with a preview-checkout cart that also takes no real payment).

Screens in this PDF:

- **Prepare Hub** (prepare_hub_screen.dart) - Prepare tab root
- **Masterclasses** (masterclasses_screen.dart) - list
- **Masterclass Detail** (masterclass_detail_screen.dart)
- **1:1 Consultations** (consultations_screen.dart) - list
- **Consultation Detail** (consultation_detail_screen.dart) - specialist profile + slot booking
- **Cohort Programs** (cohorts_screen.dart) - list
- **Cohort Detail** (cohort_detail_screen.dart)
- **Prenatal Yoga** (prenatal_yoga_screen.dart)
- **Birthing Classes** (birthing_classes_screen.dart)
- **Prepare Video Player** (prepare_video_screen.dart) - shared placeholder
- **Prepare Shared Components** (prepare_common.dart) - palette, widgets, mock booking flow
- **Community feed + Community profile** (companion file)
- **Calendar** (companion file)
- **Products / Shop and Cart** (companion file)

Screen: Prepare Hub (`prepare_hub_screen.dart`)

Status: Live - the working root of the Prepare bottom-nav tab. Content is a static replica of the design mock. **Reached from:** Bottom nav bar, the "Prepare" tab (second tab, school icon). No back button; it is a tab root. **Purpose:** Landing page for the five guided/paid Prepare experiences, with a recommended rail and a category list.

Sections & UI:

- Top bar: title "Prepare" on the left, a visual-only "EN / हिंदी" language toggle on the right (English + Hindi; not functional).
- Hero block: coral eyebrow "30 WEEKS - THIRD TRIMESTER", large headline "Prepare for your baby, one guided step at a time.", and a sub-line about live classes, expert sessions and gentle movement.
- "RECOMMENDED AT 30 WEEKS" label, then a horizontal rail of two cards: "Birth Confidence Masterclass" (90 min live, Rs 799) and "Birth-Ready Bootcamp" (Cohort, 4 weeks, Rs 6,999). Each card has a striped image placeholder, a tag, title, and price meta.
- A vertical list of five category tiles, each with a purple icon chip, title, one-line description, an item count on the right, and a right-arrow glyph: Masterclasses ("4 sessions"), 1:1 Consultations ("5 specialists"), Cohort Programs ("4 programs"), Prenatal Yoga ("6-week program"), Birthing Classes ("6-class course").
- Footer panel: "Most of this is free with ParentVeda+." (ParentVeda+ is a referenced but unbuilt subscription concept.)

Features & interactions:

- Tapping the first rail card opens the featured Masterclass Detail; the second rail card opens the featured Cohort Detail.
- Tapping each of the five category tiles pushes the matching section screen (Masterclasses, Consultations, Cohorts, Prenatal Yoga, Birthing Classes).
- The language toggle is decorative only.

Data: Pulls the featured masterclass and featured cohort from `kMasterclasses / kCohorts` in `prepare_data.dart`. No commerce here; purely navigation.

Screen: Masterclasses (`masterclasses_screen.dart`)

Status: Live - data-driven list. No real payment. **Reached from:** Prepare Hub -> "Masterclasses" tile (or the recommended rail's first card, which jumps straight to the detail). **Purpose:** Browse the four masterclasses; open any for the full detail page.

Sections & UI:

- Back row ("Prepare") plus the visual language toggle.
- Eyebrow "LIVE WITH AN EXPERT", headline "Masterclasses", sub-line, and a lavender context banner: "You're 30 weeks - birth is on your mind. Start here."
- Featured card (the "Birth Confidence Masterclass"): striped image with a coral badge pill ("Most-booked at 30 weeks"), title, one-line description, a coach avatar + coach line, a divider, then a price row ("Rs 799 - free on ParentVeda+") with a filled "Reserve a seat" button.
- "More masterclasses" list: each of the other three shows title, price, one-line description, an optional chip (for example "Great to catch up on", "Coming up next"), and a "live + recording" tag.
- Footer note: "Always live with an expert. The recording is yours forever. Free for ParentVeda+."

Features & interactions:

- Tapping the featured card, its "Reserve a seat" button, or any row in "More masterclasses" opens that Masterclass Detail screen. (The button here does NOT book directly; it navigates to the detail, where booking happens.)

Data: Lists from `kMasterclasses` (four entries). Featured entry is the one flagged `featured: true`.

Screen: Masterclass Detail (`masterclass_detail_screen.dart`)

Status: Live layout; booking and video are mocked. **Reached from:** Masterclasses list, the Prepare Hub rail, or any masterclass card. **Purpose:** Full sales/detail page for one masterclass, with a sticky reserve button that runs the mock booking flow.

Sections & UI:

- Hero: striped placeholder image with a back circle, the visual language toggle, a centered white circular play button, and a "Watch the 90-sec intro" chip.
- Below: an optional badge pill, large title, long description, and a row of three quick-fact tiles (for example "90 min / live", "Sun 13 Jul / 8:00 pm", "Forever / recording").
- "What you'll walk away with" - a checklist of learning outcomes with purple check marks.
- "Meet your coach" / "Meet your coaches" - one or two coach blocks (striped avatar, name, role, bio).
- "What mothers say" - testimonial cards with five coral stars, quote, and attribution (only when the masterclass has testimonials).
- "Common questions" - an FAQ list. Items with an answer render open (question, minus sign, answer text); items without an answer render collapsed (question, plus sign). NOTE: the FAQ rows are static - the plus/minus are visual only and do not expand or collapse on tap.
- Footer note: "Led by a verified expert. Free with ParentVeda+."
- Sticky bottom bar (PvStickyCta): price, "free on ParentVeda+" note, and a "Reserve a seat" button.

Features & interactions:

- Tapping the hero play button opens the shared Prepare Video Player with the title "<class> - intro" and subtitle "90-sec preview" (placeholder, no real video).
- The sticky "Reserve a seat" button opens the mock booking sheet (heading "Reserve your seat", CTA "Reserve my seat"). Confirming persists the booking; the sticky button then shows "Reserved" in a panel style. Tapping the "Reserved" button opens a "Cancel this?" dialog to un-reserve.

Data: Renders any Masterclass object from `prepare_data.dart`. Booked state is stored in PrepareStore (SharedPreferences), keyed by the masterclass id. Commerce is mocked - nothing is charged.

Screen: 1:1 Consultations (consultations_screen.dart)

Status: Live - data-driven list. No real payment. **Reached from:** Prepare Hub -> "1:1 Consultations" tile.

Purpose: Browse the five verified specialists; open any profile to book a call.

Sections & UI:

- Back row ("Prepare") and language toggle.
- Eyebrow "PRIVATE & PERSONAL", headline "1:1 Consultations", sub-line, and a banner: "Something on your mind after your 30-week scan? Talk it through."
- A list of five specialist rows: icon chip, role (for example "Obstetrician"), a "from Rs ___" price, the specialist name plus first credential, a one-line description, a coral star rating, a "Hindi / English" tag, an optional "Next: today 6pm" availability, and an outlined "Book" button.
- "How it works" panel: "Pick an expert -> pick a slot -> private video call. Notes saved to your health record." (Health-record saving is described copy, not a wired integration.)
- Footer note about verified specialists, real ratings, transparent pricing.

Features & interactions:

- Tapping a specialist row or its "Book" button opens that Consultation Detail (specialist profile).

Data: Lists from `kSpecialists` (five entries: Obstetrician Rs 999, Nutritionist Rs 599, Lactation Rs 799, Counsellor Rs 899, Physiotherapist Rs 699). No follow/save on this screen; there is no wired follow button (the app's `ExpertFollowStore` follow feature belongs to Community, not Prepare).

Screen: Consultation Detail (`consultation_detail_screen.dart`)

Status: Live layout; slot selection works; booking is mocked. **Reached from:** Consultations list -> a specialist. **Purpose:** Specialist profile page with selectable time slots and a sticky book button running the mock booking flow.

Sections & UI:

- Back row ("Consultations") and language toggle.
- Header: striped avatar, name, "role - credentials", coral star rating, and a "<N> mothers" count (computed as review count times 160, so it is a fabricated display number, not a real count).
- Language/format chips: "Hindi", "English", "Video call".
- "About <name>" paragraph.
- "She can help with" checklist.
- "Choose a time": a hardcoded date label "Today, 8 Jul" and a horizontal row of selectable time-slot chips (default four: 6:00 pm, 6:30 pm, 7:15 pm, 8:00 pm). The selected chip turns purple.
- "From mothers she's seen" - review cards (name, when, five coral stars, quote).
- "How it works" panel: "Pick a slot -> private video call -> notes saved to your health record."
- Sticky bottom bar: consult price, "30-min call" note, and a "Book for <selected slot>" button (label updates as you pick a slot).

Features & interactions:

- Tapping a time-slot chip selects it (updates the sticky button label). Selection is UI-only; it is not persisted beyond the current screen.
- The sticky "Book for ..." button opens the mock booking sheet (heading "Confirm your consult", CTA "Confirm booking", showing "Today, 8 Jul + slot"). Confirming persists the booking; the button then reads "Booked", and tapping it offers a cancel dialog.

Data: Renders any Specialist from `prepare_data.dart`. Booked state via `PrepareStore` keyed by specialist id. Slots come from each specialist's `slots` list. Commerce mocked.

Screen: Cohort Programs (cohorts_screen.dart)

Status: Live - data-driven list. No real payment. **Reached from:** Prepare Hub -> "Cohort Programs" tile (or the hub rail's second card, which jumps to the featured cohort detail). **Purpose:** Browse the four cohort programmes; open any for detail.

Sections & UI:

- Back row ("Prepare") and language toggle.
- Eyebrow "TOGETHER, GUIDED", headline "Cohort Programs", sub-line, and a banner referencing the Birth-Ready cohort starting Monday.
- Featured cohort card (purple panel): a "Recommended - 30 to 34 weeks" pill, a seats-left line ("32 of 100 seats left"), name, duration + start, description, a coach avatar/line, divider, price, and a filled "Join the next cohort" button.
- "More programs" list: each row shows name, price, description, and a duration/timing meta line.
- "What's inside every cohort" panel: live sessions, small peer group, weekly homework, a private WhatsApp group, plus a "Rs 500 credit for ParentVeda+" line.
- Footer note.

Features & interactions:

- Tapping the featured card, its button, or any "More programs" row opens that Cohort Detail. The button here navigates to the detail (does not book directly).

Data: Lists from `kCohorts` (four entries, Rs 4,999 to Rs 7,999). Featured is the entry flagged `featured: true` (Birth-Ready Bootcamp).

Screen: Cohort Detail (`cohort_detail_screen.dart`)

Status: Live layout; join/enroll is mocked. **Reached from:** Cohorts list, or the Prepare Hub rail. **Purpose:** Full detail for one cohort, with a sticky join button running the mock enroll flow.

Sections & UI:

- Back row ("Cohort Programs") and language toggle.
- Header: optional "Recommended" pill and seats-left line, large cohort name, description.
- Three quick-fact tiles: duration ("programme"), start date or the for-whom window ("start" / "timing"), and "Live / + peer group".
- "What's inside" checklist.
- "The plan" - a numbered week-by-week schedule (only when the cohort defines one).
- "Your coach" block (avatar, name, "Leads every live session and the group.").
- "From mums who did it" - review cards (only when present).
- A "Rs 500 credit for ParentVeda+ members on any cohort." panel.
- Footer note.
- Sticky bottom bar: price, duration note, "Join the next cohort" button.

Features & interactions:

- The sticky "Join the next cohort" button opens the mock booking sheet (heading "Join this cohort", CTA "Join cohort"). Confirming persists it; the button then shows "Enrolled" and tapping it offers a cancel dialog.

Data: Renders any Cohort from `prepare_data.dart`. Enrolled state via `PrepareStore` keyed by cohort id. Commerce mocked.

Screen: Prenatal Yoga (`prenatal_yoga_screen.dart`)

Status: Live and interactive; the videos are placeholders and there is no real payment. **Reached from:** Prepare Hub -> "Prenatal Yoga" tile. **Purpose:** A trimester-safe yoga program. Shows the safe (third-trimester) session track and hides earlier-trimester tracks as "not safe at 30 weeks".

Sections & UI:

- Back row ("Prepare") and language toggle.
- Eyebrow "SAFE FOR YOUR STAGE", headline "Prenatal Yoga", sub-line, and a shield-icon banner explaining that unsafe content for 30 weeks is hidden.
- Program card: striped image, "Prenatal Yoga Program", "6 weeks - with Sana Kapoor, certified prenatal instructor", and pricing "Rs 599 - Free with ParentVeda+".
- Trimester tabs: "Trimester 1" and "Trimester 2" both show a lock icon; "Trimester 3 - here" is active by default.
- When Trimester 3 is selected: a list of five yoga sessions (title, "duration - focus", a "Safe for you" pill, and a small play triangle).
- When a locked trimester tab is selected: a panel explaining those poses aren't safe at 30 weeks, with a "Back to my safe track" button.
- Italic note and a footer note about content being filtered for the exact week.

Features & interactions:

- Tapping the Trimester 1 or 2 tab switches to the locked-track explanation panel; "Back to my safe track" returns to Trimester 3.
- Tapping any of the five sessions opens the shared Prepare Video Player (title, "duration - focus" subtitle, and the session blurb) - placeholder, no real video.
- There is no buy/enroll action on this screen; the program price is display-only.

Data: Sessions from `kYogaSessions` (five entries) in `prepare_data.dart`. Tab state is local screen state only.

Screen: Birthing Classes (birthing_classes_screen.dart)

Status: Live and interactive; enroll is mocked, videos are placeholders. **Reached from:** Prepare Hub -> "Birthing Classes" tile. **Purpose:** A six-class birthing course. Class 1 is a free preview; a mock enroll unlocks classes 2 through 6.

Sections & UI:

- Back row ("Prepare") and language toggle.
- Eyebrow "FOR THE BIG DAY", headline "Birthing Classes", sub-line, and a banner ("You're 30 weeks - exactly when most mums prepare for birth.").
- Overview card: "Complete Birthing Course", "6 classes - self-paced video + a monthly live Q&A", a coach line (Meera Nair, OB-reviewed), and a price/CTA row. Before enrolling: "Rs 1,499 - free on ParentVeda+" with a "Free preview" button. After enrolling: "Enrolled" with a "Start watching" button.
- "The 6 classes" list: each row shows number, title, duration, and a status marker - class 1 has a "Free preview" pill; when enrolled, all rows show a play triangle; when not enrolled, classes 2 to 6 show a lock icon.
- When not enrolled, a full-width "Enroll - unlock all 6 classes" button.
- Footer note.

Features & interactions:

- The overview button plays class 1 into the Prepare Video Player (free preview).
- Tapping an unlocked class (class 1 always, or any class once enrolled) plays it into the Prepare Video Player. Tapping a locked class opens the mock enroll flow.
- The "Enroll" button (and any locked class) opens the mock booking sheet (heading "Enroll in this course", CTA "Enroll now"). Enrolling persists the course id and unlocks all classes; the UI reacts live via PrepareStore.

Data: Classes from `kBirthingClasses` (six entries; class 1 flagged `free: true`). Enrollment tracked in `PrepareStore` under the fixed id `course_birthing`. Commerce mocked.

Screen: Prepare Video Player (`prepare_video_screen.dart`)

Status: Placeholder - no real video playback is wired. **Reached from:** Masterclass Detail (intro), Prenatal Yoga (each session), Birthing Classes (each unlocked class). **Purpose:** A calm placeholder "player" that stands in for real clips, showing the title and blurb, ready for a real player to be dropped in later.

Sections & UI:

- Back row ("Back") and language toggle.
- A 16:10 striped "player" surface with a centered white play button and a "Video coming soon" chip.
- Below: the passed title, an optional purple subtitle (for example "18 min - opening"), an optional blurb paragraph, and a lavender panel: "The full video lands here soon. We'll notify you when it's ready to watch."

Features & interactions:

- None functional beyond the back navigation. The play button does not play anything.

Data: Purely presentational; takes title / subtitle / blurb as constructor arguments from the calling screen.

Screen: Prepare - Shared Components (`prepare_common.dart`)

Status: Live - shared styling and building blocks used by every Prepare screen. Contains the mock booking flow. This is a support file, not a navigable screen. **Reached from:** Not a screen; imported by all Prepare screens (and `prepare_data.dart`). **Purpose:** Holds the "Warm Nest" palette, text styles, and reusable widgets so every Prepare screen renders consistently, and it implements the shared mock booking flow.

Sections & UI (what it provides):

- Palette constants (canvas, ink, purple, coral, panel, borders, etc.) and text styles (Fraunces headings, Manrope/Jakarta body).
- Reusable pieces: the "EN / □□□" language toggle (visual only), the top bar (title or back row), eyebrow labels, pills, lavender banners, primary/outline buttons, a diagonal-striped image placeholder (`PvStriped`, standing in for all imagery and video thumbnails), and a striped coach/expert avatar.
- `pvcComingSoon(...)` - a helper that shows a "<X> opens soon" snackbar for CTAs without a backend.

Features & interactions (the mock booking flow):

- `showPrepareBooking(...)` opens a bottom sheet with two states. State 1 (confirm): the item title, an optional "when" line, the price, and the disclaimer "We'll hold your spot and remind you before it starts. Payments aren't live yet - nothing is charged now.", plus a confirm button. Tapping confirm calls `PrepareStore.book(id)` and switches to State 2 (success): a check mark, "You're all set!", a message that the item is "saved to your Prepare list", and a "Done" button. This single sheet powers reserving a masterclass, booking a consult, joining a cohort, and enrolling in the birthing course.
- `PvStickyCta` - the sticky bottom bar shared by all detail screens. It watches `PrepareStore` and shows either the buy button (purple) or, once booked, a panel-styled "<check> <Reserved/Booked/Enrolled>" button. Tapping the booked button opens a "Cancel this?" dialog ("Keep" / "Cancel it") that calls `PrepareStore.cancel(id)`.

Data: `PrepareStore` (singleton `ChangeNotifier`, `prepare_store.dart`) stores the set of "booked" item ids in `SharedPreferences` under key `prepare_booked_v1`, so reservations survive an app restart. Its own comments state the Prepare commerce flows are a mock with no payment gateway, and that this store is the seam where a real commerce backend would later plug in. `prepare_data.dart` is the single static source of all Prepare content (masterclasses, specialists, cohorts, yoga sessions, birthing classes), described in its comments as a faithful static replica of the design mock, not yet week-adaptive or CMS-backed.

Screen: Community (`community_screen.dart`)

Status: Live (functional prototype over seeded data). Posting, joining, liking, saving, reposting, voting, commenting and hiding all work and persist locally (via `CommunityStore` + `shared_preferences`, with best-effort cloud sync). What is seeded or cosmetic is called out below. The old "Community Pulse" carousel is commented out (removed, kept for revert).

Reached from: The "Community" bottom-navigation tab (5th tab, groups icon). Also reachable from the Tools hub list, the global search screen, and Ask Veda. (The file header comment calling it a "Tools tab" is outdated; it is a primary bottom-nav tab.)

Purpose: A personalised parenting social layer: rooms ("communities") plus one algorithmic feed where the mother can read, post, react to, and discuss pregnancy topics, with a trust language that visibly marks verified experts.

Sections & UI (home feed, top to bottom):

- Soft pink-to-purple background wash. Top row of utility icons (right-aligned, in-scroll): Doctor (test) mode toggle, My Bookmarks, My Activity, Search.
- Warm header: a pink eyebrow kicker, a large serif title, and a subtitle (all English + Hindi via localization).
- Optional "Doctor mode" gradient banner (only when doctor test mode is on) with an "Exit" button.
- "Your communities": horizontal cards for joined rooms, each a gradient monogram badge, member count, an unread-posts count pill, and a green online dot. Long-press opens a sheet to Mute/Unmute or Leave.
- "Recommended for you": horizontal cards for rooms not yet joined, each with emoji, name, member count, description, and a Join / Joined button. If everything is joined, a friendly note shows instead.
- Feed toggle: two chips, "For you" (ranked blend) and "Following" (only joined rooms + followed experts).
- Doctor mode only: a "Needs verification" filter chip that narrows the feed to posts that asked for expert verification and are not yet verified.
- The feed: a list of flat, Twitter-style post rows.
- Floating compose button (round "+"). In doctor test mode it turns into a medical icon and authors as the test doctor.

Post row (`CommunityPostCard`) UI:

- Author avatar (a purple gradient seal with a verified badge for experts; a soft tinted disc for members), author name, verified tick for experts, "@handle", and a pseudo "time ago" (cosmetic, derived from the post id; user posts read as "now").
- The room the post is in ("in [emoji] [name]").
- Post body text; attached real photos (device gallery/camera images) or an emoji stand-in image; poll options; topic hashtags.
- Engagement row: comment count, repost count, like (heart), a cosmetic "views" number, save (bookmark), and share.
- A verification line: an endorsed post shows a subtle "Verified by ..." hint (tap opens a "who verified" sheet listing fictional experts); a post that requested verification shows an "Awaiting [specialty] verification" tag (or, in doctor mode, a "Comment to verify this post" prompt).

- A "..." menu per post: Follow/Unfollow the expert, Not interested (hides the post for the session), Mute user, Block user, Report. Mute/Block/Report are toast-only stubs; Not interested and Follow are functional.

Features & interactions:

- Post: the compose flow (CreatePostScreen) is functional. The mother types text (with mic dictation), optionally attaches real photos from gallery or camera (via `image_picker`), picks where to post ("Your feed" or a joined room), picks a post type (Question/Experience/Milestone/Photo), and can toggle "Ask an expert to verify this" with a preferred specialty. Auto-suggested topic hashtags are inferred from the text. Sending creates a real, persisted post that pins to the top of the feed.
- Like, save (bookmark), repost, and "not interested" hide all work per post and persist (except "not interested", which is session-only).
- Polls: tapping an option records a vote (persisted); the chosen option is highlighted. One vote per poll.
- Join/leave a room, mute/unmute a room: functional and persisted. On first run, the pregnancy-stage rooms marked auto-join (November 2026 Moms, Second Trimester, Delhi Moms) are joined automatically.
- Doctor (test) mode: a testing toggle that makes the user post and comment as the fictional "Dr. (You)" (OB-GYN), so posts render with the expert seal. A doctor commenting on a post that requested verification marks that post as expert-verified. This exists to demo the doctor experience; there are no real doctor logins.
- Search (`_CommunitySearchDelegate`): searches rooms (by name/topic) and posts (by text/author/topic).
- My Activity: lists the user's own posts, commented posts, liked posts, and upvoted posts. My Bookmarks: lists saved posts. Both are functional views over stored state.
- Room detail (`CommunityDetailScreen`): a banner (emoji, name, members, description, Join button), a composer entry (if joined), and that room's posts.
- Post detail (`PostDetailScreen`): the full post, seeded plus user comments, a comment composer (functional, persisted), "Related discussions" (posts sharing a topic), and "Suggested communities" (recommended rooms sharing a topic).

Data: `CommunityStore` (joins, mutes, likes, saves, upvotes, reposts, votes, user posts, user comments, doctor mode, doctor endorsements; persisted via `shared_preferences` and cloud-synced). Seed rooms and posts come from `community_data.dart` (`kCommunities`, `kSeedPosts`, `kSeedComments`). Models in `community_models.dart` (`Community`, `CommunityPost`, `CommunityComment`). Expert follows use `ExpertFollowStore`. What is mock/seeded: the verified experts and endorsement counts (fictional doctors in `kCommunityExperts`), the "who verified" sheet, "views"/"time ago"/base repost counts (cosmetic derived numbers), and the feed "ranking" (a simple engagement heuristic, not real ML). Real backend features such as live expert sessions, DMs, and moderation are not built. Note: `community_data.dart` also holds separate parenting-stage rooms/posts (`kParentingCommunities`, `kParentingPosts`) used only by the post-pregnancy app, not by this pregnancy screen.

Screen: Community Profile (`community_profile_screen.dart`)

Status: Live. The follow action and the author's post list are functional; some numbers are mock (see Data).

Reached from: Tapping a post author's avatar or name anywhere a `CommunityPostCard` appears (feed, room detail, post detail, My Activity, My Bookmarks).

Purpose: An X/Twitter-style author profile that separates verified experts from ordinary members and shows that author's posts.

Sections & UI:

- App bar with the author's name.
- Header: a large avatar (purple gradient seal for experts, tinted disc for members), the name with a verified tick for experts, and "@handle".
- Experts additionally show a credential pill (for example "IBCLC") and a generic expert bio; members show a "Member" badge.
- A stats row: post count, followers, following.
- A divider, then the author's own posts rendered with the shared post card (tap opens the post detail). If none, a "no posts yet" note.

Features & interactions:

- Follow / Following button (experts only): functional, toggles via `ExpertFollowStore`.
- Tapping any listed post opens its detail screen.

Data: Author identity, credential, and posts come from the tapped `CommunityPost` plus `CommunityStore.createdPosts` and the seed posts. The post count is real (posts by that author). Followers and following counts are mock (derived from the author name's hash). The expert bio is a fixed localized string, not per-author.

Screen: My Calendar (`calendar_screen.dart`)

Status: Live. Views, filters, search, adding/deleting personal events, and the assembled event feed all work; personal events and appointments persist (locally, with best-effort Supabase cloud sync).

Reached from: The "Calendar" bottom-navigation tab (4th tab, calendar icon). Also reachable from the global search screen and Ask Veda.

Purpose: The pregnancy "command center" that answers where am I, what has happened, and what is next, by merging system milestones, journal and health logs, appointments, and the mother's own events onto one timeline/calendar.

Sections & UI:

- Header: title "My Calendar" (English + Hindi), a search toggle (searches event title/description), and a "+" to add a personal event.
- Progress card: current week of 40, "days together" with a heart glyph, a circular percent ring, and days remaining.
- A segmented control with three tabs: Journey Timeline, Calendar, Upcoming. The screen opens on the Calendar tab by default.
- Category filter chips: All, Milestones, Medical, Appointments, Journal, Personal, ParentVeda. Each category has its own dot colour.
- Tab 1, Journey Timeline: a vertical rail of event cards. Each card has a category icon, title, description, date, a left colour bar, and a status pill: "You are here" (current week), "Completed", or "Upcoming". Tap a card to open its event sheet.
- Tab 2, Calendar grid: month name with previous/next arrows, weekday letters, and a day grid. Each day cell shows the day number, up to three coloured category dots for that day, a small gold week-start tag (for example "21w"), a trimester-start pill on weeks 4/14/28 (T1/T2/T3), a "Childbirth" tag on the due date, a soft highlight band across the current pregnancy week, and a filled circle on today. Tapping a day selects it. Below the grid: a collapsible "What the dots mean" colour legend, and a selected-day panel showing that date, its pregnancy week, each event on that day (named with its category and meaning), and an "Add Note" row.
- Tab 3, Upcoming: future events grouped into This Week, Next 2 Weeks, This Month, and Later, each row showing the event icon, title, and a days-out label. Tap opens the event sheet.

Features & interactions:

- Add personal event ("+" or "Add Note"): a bottom sheet with a title field, a note field (with mic dictation), and a date picker. Saves a persisted personal event. Add Note pre-fills the selected day's date.
- Event sheet (tap any event): icon, title, full date, description, and context actions: "Open Week N" (jumps to that week in the weekly card stack), "Open Journal", and "Delete" (personal events only).
- Filter chips narrow every view to one category; search narrows by text.
- Month navigation and day selection are functional; the current week and due date are highlighted automatically from the saved due date.

Data: `CalendarStore.allEvents(...)` assembles the event list at build time by merging: system milestones/medical/ParentVeda-unlock events from `kJourneyMilestones`; journal entries from `JournalStore`; weight and kick-session logs from `ToolsStore` (as journal-lane events); mother-added personal events (persisted by `CalendarStore`); and appointments from the shared `ScansStore` (shown in

the green "Appointment" lane). Scans appear two ways: the scheduled scan roadmap shows as blue "Medical" milestone events, and appointments the mother added under Scans & Appointments show as green "Appointment" events (these can also be partner-shared read-only). Completed scans are recorded to the Journal rather than added here directly. Models: `CalendarEvent`, `CalendarEventCategory`, `CalendarEventStatus`, `CalendarMeta` (colour + icon per category) in `calendar_event.dart`.

Screen: ParentVeda Products / Shop (`products_screen.dart`)

Status: Live. It is a working catalog with saved items, an in-app cart, and a preview (mock) checkout. It is framed as a trust-first "decision engine", not a plain catalogue. Real payment is NOT taken; roughly half the catalog is affiliate (buy on Amazon, external), half is ParentVeda (in-app cart plus mock checkout).

Reached from: Not a bottom-nav tab. Opened from the Tools hub, the Home screen, the global search screen, Ask Veda, and the product-checklist "add products" flow.

Purpose: Help the mother reach a confident purchase decision per category (what to look for, what to avoid, when it is useful, top scored picks, and structured reviews) rather than just browse a list.

Sections & UI:

- App bar: title with a heart glyph, a search action, and a cart icon with a live item-count badge.
- Three tabs: Recommended, Browse all, Saved.
- Recommended tab: a heading for the current week, a subtitle, then category cards relevant to the current pregnancy week (each tagged "Relevant now"). If none are relevant, all categories show.
- Browse all tab: every product category as a card (emoji, name, one-line guidance, "See picks" arrow).
- Saved tab: product cards for items the mother saved (heart), or an empty state.
- Category page (`ProductCategoryScreen`): a guidance card (one-line advice plus "Look for" checks and "Avoid" crosses), a week-relevance timeline (shows whether the category is useful now or coming up, with a "you are at week N" marker), then "ParentVeda Picks" as product cards, then a browse-all count.
- Product card: badge (for example Best Overall, Best Budget, Best Premium, Sensitive Skin, Newborns), an "Affiliate" tag on Amazon products, a save heart, an emoji thumbnail, name and summary, a score pill (x/10), a "Best for" line, "Why" reasons (green checks), "Consider" caveats (red dots), price, and a Buy button. The Buy button says "Buy on Amazon" for affiliate products (opens an external Amazon India search URL) or "Buy now" for ParentVeda products (opens a single-item mock checkout).
- Product detail (`ProductDetailScreen`): a hero (large emoji, affiliate tag, badge, name, summary), a Verdict card (score, best-for, price), the week-relevance timeline, a "Why / Consider" card, a review summary (most loved, praise, drawback, "would buy again %"), structured parent reviews (used during, liked, watch out, would-buy-again tick), buy actions, and related products. The app bar also has an "Add to checklist" action and the cart icon.

Features & interactions:

- Save/unsave a product (heart), persisted via `ProductStore`.
- Search (`_ProductSearchDelegate`): matches categories and products, guidance-led.
- Affiliate product Buy: launches an external Amazon India search URL (`url_launcher`); no in-app cart.
- ParentVeda product Buy now: opens the preview checkout for that one item. Add to cart: adds to the in-app products cart (with a size step for apparel categories).
- Add to checklist: adds the product to a product checklist.

Data: Seed catalog in `product_data.dart` (`kProductCategories`, `kProducts`) with helpers `recommendedCategories(week)`, `productsForCategory`, `productIsAffiliate`, `amazonSearchUrl`. Models in `product_models.dart` (`Product`, `ProductCategory`, `ProductReview`, `ReviewSummary`, `ProductBadge`). Saved list is `ProductStore` (persisted + cloud-synced). Scores, badges, reviews, and review summaries are seeded editorial content. Product photos fall back to a placeholder image service or the emoji. The affiliate/ParentVeda split is defined by a fixed id set (about 12 of 24 products are affiliate).

Screen: Cart & Preview Checkout (`cart_screen.dart`)

Status: Live but simulated. It is a believable marketplace cart and checkout; NO real payment is processed. The flow ends at a friendly "order placed" preview, and placing an order marks the items as "bought" so checklists can show an "already bought" state.

Reached from: The cart icon in the Products and Product Detail app bars (opens the products cart), and the "Buy now" buttons on ParentVeda products (open a single-item throwaway checkout). Also used for hospital-bag items via a shared helper.

Purpose: Let the mother review chosen items, adjust quantities and variants, and complete a preview order, with reusable helpers for adding to cart and for a single-item buy-now.

Sections & UI:

- Cart list: one row per line item with an emoji thumbnail, name, size/colour variant chips, a quantity stepper, unit price and line total, and a remove (x) button.
- Price summary bar: subtotal, delivery ("Free"), total, and a "Buy now" button.
- Empty state: a cart icon and an encouraging message when the cart is empty.
- Checkout screen (`_CheckoutScreen`): a "Deliver to" card (a mock saved address with a "Change" affordance), an order summary (each item with quantity/size and line total), a price card (subtotal, free delivery, total), a payment-method card carrying a "Coming soon" tag, and a "Place order" button showing the total.
- Order-placed view: a celebration state ("order placed") with a subtitle and a "Continue shopping" button that returns to the first screen.

Features & interactions:

- Add to cart (`showAddToCartFlow`): for apparel categories (maternity wear, nursing bra, compression socks, swaddle) it first asks for a size via a bottom sheet, then adds the line and shows a snackbar with a "View cart" action.
- Quantity stepper: increase/decrease per line; dropping to zero removes the line. Remove (x) deletes a line. All cart changes persist.
- Cart badge (`cartIconButton`): a reusable app-bar cart icon with a live total-quantity badge.
- Buy now (single item, `showSingleItemBuyNow` / `showSingleBuyNow`): uses a throwaway one-item cart so the real cart is untouched, then runs the same preview checkout.
- Place order: takes no payment; it marks every ordered product id in `BoughtStore` (so product checklists can display "already bought"), then shows the celebratory placed view. The payment method is explicitly a "coming soon" placeholder.

Data: `CartStore` holds separate carts (products, hospital bag, and a throwaway "buyNow" cart), each a list of `CartItem` (product id, name, emoji, unit price, quantity, optional size/colour), persisted and cloud-synced. `BoughtStore` holds the set of bought product ids (persisted + cloud). Prices are formatted as Indian rupees (`formatINR`), parsed from the product price label. No order records, shipping, or payment integration exist; checkout is a front-end simulation.
