ParentVeda

One calm companion from trying to conceive, through pregnancy, to raising a child. India-first, bilingual and built with doctors.

TRYING TO CONCEIVE

Cycle companion. Period, ovulation, temperature and symptom logs, a fertile-window view and a monthly cycle report.

PCOS check and pre-conception check. Guided self-checks that end in a summary to take to a doctor, never a diagnosis.

Fertility-treatment support. IVF readiness, treatment rounds, medication and dose reminders, and a semen-report explainer.

"Can I...?" look-ups. Quick, sourced answers on food, medicines and everyday activities.

Pre-conception Garbh Sanskar course. Daily guided practice, rituals, breathing and audio.

Partner mode. A partner home and shared logs, so both partners prepare together.

Health records. Tests, vaccines, appointments and the questions to ask at the next visit.

PREGNANCY

Week by week. Baby growth, body changes and a daily insight for every week.

Garbh Sanskar. A daily ritual, Garbh Shravan audio, Samvad (talking to baby), relaxation and brain games.

Ready for birth. Birth plan, hospital bag, contraction timer and baby-movement counter.

Health tools. Weight, medicines, scans and appointments, a readings log, a symptom companion and Kegel care.

Classes and masterclasses. Birthing classes, prenatal yoga, expert masterclasses, cohort courses and consultations.

Keepsakes. Bump Book, a "Dear Baby" letter vault and a private journal.

Respects the clinic. A due date set by a scan or a doctor is never overridden by our calculation.

PARENTING

Development map. Milestones, a leap calendar and activities for every age band.

Feeding and food. Feeding and breastfeeding timer, weaning food builder, meal plans, recipes and a food-safety check.

Baby health. Vaccine and records timeline, fever check, "Is baby OK?" check, emergency guide and doctor-visit notes.

Mother's recovery. The first 40 days, Mind and Mood with breathing exercises, and a calm path to help when it is needed.

Baby naming. Name finder, swipe-to-shortlist with a partner, and astrology-aware matches.

Masterclasses and courses. Expert-led parenting masterclasses and cohort courses.

Early learning. Age-banded skill activities behind a parent gate, with a keepsake portfolio.

Whole family. A father's view, several children in one account, and family documents with reminders.

ACROSS EVERY STAGE

Ask Veda. Answers grounded in vetted content. It says "I don't know" rather than improvise, and sends red flags to a doctor.

Community. Mothers helping mothers, with doctor-moderated questions.

Care Circle. Partner and family share the journey with the consent of the person it belongs to.

Doctor and partner apps. Consultations, classes and bookings for clinicians; a QR-led partner app for clinics and brands.

English and Hindi. Devanagari script and a Hindi voice; local-first, so it works offline.

Safe by design. Never a diagnosis and never a personalised success rate. The treating clinician always has the final word.

One app that grows with the family: the same person, records and bookmarks carry from one stage to the next. Everything clinical ends with a disclaimer and a calm route to a doctor.
