

The doors, against the briefs they were built from

Trying to Conceive · Pregnancy · Parenting · Skilling. What each brief asked for, what is built, what is not — and where the same content *outside* a door was left behind when the door was brought up to its brief. 22 September 2026.

What was checked, and against what.

- **Briefs:** the 41 PDFs in Downloads\door-pdf — TTC 9, Pregnancy 8, Parenting 12, Skilling 12 — plus the two home change-lists and the bottom-nav list supplied separately.
- **Surfaces:** each stage's **door** and each stage's **V3 home**. The Classic / V1 homes are kept for revert and are deliberately out of scope. Search, the Tools hub and the Explore sheet were checked wherever they hold a second copy of something a brief touched.
- **Every point is numbered 1–124.** Feedback can be given as a point number.
- **Status words:** **BUILT** to the brief · **CHANGED** deliberately, reason on the record · **PARTIAL** · **NOT BUILT** · **UNWIRED** the door is right, something else is not · **BLOCKED** can't be reviewed yet · **DECIDED** already settled, please don't re-open.
- **Section 1 is the only part that needs a decision before the rest is worth reading.** Sections 2–5 are per-stage compliance; section 6 is the two home lists point by point; section 7 is the content still owed, counted.

1. Read this first — what needs attention, not what already agrees

Twenty points. The first seven are the class of problem worth the most attention: the door matches its brief and the *same thing somewhere else in the app* does not, so a reviewer sees two versions of one feature depending on where they tapped.

1A · THE DOOR IS RIGHT, THE REST OF THE APP IS NOT

1 **UNWIRED** Garbh Sanskar on the pregnancy home opens the old library, not the door.

The door was built to ParentVeda_Garbh_Sanskar_rebuild.pdf: five sub-tabs, Today as a launcher, the honesty note, the STOP IF block pinned. The V3 home's full-bleed Garbh band — the most prominent Garbh surface in the app — sends "About" to the *pre-brief* four-tile Tools library instead, which has none of that structure and still names the pillar "*Samvad & Vichara*", a pillar the rebuild removed. The bracket tile, the Tools hub, the hub need and the journey step all reach the door correctly; only the home band does not.

home_v3_screen.dart:857 pushes GarbhScreen (the library) under the route name garbh; the surface garbh_daily would have reached the door.

2 **UNWIRED** Two different screens are called "My Journal" in the pregnancy stage.

The home's *My journal* opens JournalScreen (JournalStore); the Garbh door's fifth tab opens GarbhJournalScreen (GarbhJournalStore) — a different screen, a different store, the same name. The Garbh brief's rule is "*everything read or recorded here lands in My Journal (single source)*". A mother has two places a memory might be and no way to guess which.

- 3 **UNWIRED** "Log a symptom" from the pregnancy home opens the old 12-symptom companion, not the new Symptoms door.
- The Symptoms door (built 2026-09-22) is a check-in over **33** symptoms in six areas, with a day strip, severity and a week log. The home's daily-insight card for logging still pushes `SymptomCompanionScreen` — the old tool, twelve symptoms. Two check-ins, one stage.
- `home_v3_screen.dart:1589, PregInsightGo.log.`
-
- 4 **UNWIRED** A symptom's page opens in the shared reader inside the door and in a bespoke screen from the home.
- The door's note says the symptom detail "*is a read now*" — true inside the door. Tapping a symptom card on the home calls `openSymptomDetail`, which pushes a hand-built `_SymptomDetail` instead of `PvReaderScreen`. One symptom, two layouts. This is the one rule the codebase has a test for elsewhere ("one reader"), and this path is outside it.
-
- 5 **UNWIRED** "Tests, Scans & Reports" was retired from the Scans door and is still a tile in the Tools hub.
- The Scans brief's whole point was one home per fact: the report parameters now live inside each scan read, and the separate parameter library was retired from the door. `TestsScansReportsScreen` is still reachable as a Tools tile, so the thing the door removed is one tap away from the Tools tab.
-
- 6 **UNWIRED** Three separate milestone datasets describe the same child, in three places.
- The parenting home's *How your baby is doing* derives from `AgePhase.milestones` (the AAP/CDC list). The Development door's tracker reads `MilestoneStore` (18 milestones, six domains). The four "areas of growing" pages read `DevArea` skills. The tracker and the areas are joined by a hand-written map. Ticking something in one place does not update the other two.
- Logged as DV2 in `DOOR-CONTENT-OWED.md`; it is a data job, not a screen job.
-
- 7 **NOTE** Four screens the Scans door retired are still routable, on purpose.
- `ScanUrgentScreen`, `ScanNextScreen`, `ScansAppointmentsScreen`, `TestsScansReportsScreen` are alive by route so the change can be reverted. Nothing on the door points at them (except point 5). They should be deleted after a release or two — worth a decision date.
-
- 1B · CANNOT BE REVIEWED IN A RELEASE BUILD**
- 8 **BLOCKED** None of the seven built Skilling doors opens in a release build.
- `skOpenDoor` returns `false` when `!kDebugMode`, so every one of the twelve skilling tiles shows a *plan sheet* in a release build. This was the decision of 2026-09-14 ("the preview ships, the door does not") — but it means a PM on a release build cannot see Coding, Communication, Confidence, Thinking, Stillness, Feelings or Making at all.
- `sk_surface_router.dart:153.`
-
- 9 **NOT BUILT** Skilling has no home screen. The stage's home *is* the design preview.
- Signing in as a skilling family lands on `SkillingPreviewScreen`, which says so on screen: "*The fourth stage, UI only — nothing behind the doors.*" There is no V3 home for skilling, so points 6a/6b of section 6 have no skilling equivalent.
-

10 **BLOCKED** Twelve video ids can play, and all twelve play the same sample file.

This matters because the home change-lists made video the *primary* explanation on both homes. `kDevVideoUr1s` maps 7 parenting ids and 5 pregnancy ids to one 720p MP4 in Supabase Storage. Everything else — the three-film shelf, every door's film slot — renders an honest poster and a "film arriving" state. So "This Week Explained" and "This phase explained" are correct layouts over one placeholder clip.

11 **BLOCKED** `kUseDevVideos = true` must be switched off before release.

Its own comment: "Turn OFF once the backend supplies real `WatchVideo.videoUr1` values so nothing dev-only ships." Today a store build would stream a dev sample from a public bucket.

12 **BLOCKED** Photographs are still fetched from Wikimedia and drop out under throttling. The R2 upload is named the launch blocker.

A reviewer will see missing images on Nutrition, Is it safe? and several door rails, at random. Retries were lengthened as a stopgap. The fix is a one-off upload of the mirrored folder to an R2 bucket — it is on the user, not in code.

STILL-OPEN.md §70.3, §63.18.

13 **NOTE** A review build needs `--dart-define=PV_DEV=true`.

Without it the You screen's Developer section — which holds the stage switch — is tree-shaken out, and a reviewer cannot move between TTC, Pregnancy, Parenting and Skilling in one build.

1C · A BRIEF IS CONTRADICTED SOMEWHERE OUTSIDE ITS OWN DOOR

14 **CHANGED** A seven-day streak milestone is live in TTC, and two briefs forbid a streak.

The eight-sessions brief: "There is no streak and nothing to maintain... No streak, no completion badge, no certificate." The Mind & body brief: "No streak and no streak-break message anywhere." Both were honoured on their doors — and `ttc_milestones.dart` still awards "Kept the daily ritual for a week" at `streak() >= 7`, on the Journey map, one tap from the V3 home. The home's own streak card was correctly retired; this one was missed.

15 **CHANGED** Nutrition's first and third tabs are no longer the brief's.

The brief's five: *Can I eat this?* · *What to eat now* · *Nutrients & recipes* · *Charts & fasting* · *Talk*. Shipping: *Today* · *What to eat now* · *Recipes* · *Charts & fasting* · *Talk*. Tab 1 became the day (the plate, the ticks, water, cravings) and "Nutrients & recipes" became "Recipes"; the two brief labels are commented out in place. The change came from the user's own device walk of 2026-09-20, after the brief. Flagged because it is the one pregnancy door whose tab list no longer matches its PDF.

16 **CHANGED** TTC still writes Hindi in Latin script; the rest of the app moved to Devanagari.

Roman-script Hindi was dropped app-wide on 2026-08-03 and fully removed from Pregnancy on 2026-08-12. About **30 files** in the TTC tree still carry it — including the milestone in point 14 ("*Ek hafte daily ritual nibhaya*"). It also breaks voice: the app asks the OS for the `hi-IN` voice, which cannot read Roman script.

17 **NOTE** Heading case is inconsistent between the two homes.

Pregnancy ships "Watch These Videos This Week" in title case (as the list was written); parenting ships "Recommended reads for today", "Activities to do today with your baby" in sentence case. Both follow their list's wording; only the capitalisation differs. One rule, either way, would be a five-string change.

18 **DECIDED** "What to Buy first among the eleven" was built, then reverted on instruction.

Built 2026-09-16, reverted 2026-09-18 on the user's words "*the door positioning should be like the way it was*" — on a phone it read as the shop leading a parenting home. The hoist is kept commented one line away. Tiles are in registry order, Sleep first.

19 **DECIDED** Neither V3 home has a search bar. Search lives in each door's hero.

A bar sat under "Start anywhere" for an hour on 2026-09-18 and was removed on the user's words "*not below Start anywhere, that wasn't my intent.*" Each door's hero carries a field scoped to that door, with "Everywhere" one tap away; it indexes the door tiles and opens through the same router the door uses, so a search hit and a door tap cannot land on different screens.

20 **DECIDED** Old landings, hubs and classic homes are still on disk by policy.

"Comment out, never delete" is a standing repo rule. Classic pregnancy/parenting/TTC homes, the Scans hub, the nutrition day screen, the mind-mood landing and the parenting hub configs all still ship and are unreachable from the V3 path. They are not dead code left by accident; they are one uncommit from being the product again. Points 1–5 are the cases where an old screen is *still reachable* — those are the defects.

2. Trying to Conceive — 7 tiles, 7 doors, all built

Nine PDFs: six door briefs, three content briefs for Mind & body and the preconception course. Conceiving predates the brief set. Every bracket opens a door; none opens a hub.

TILE	BRIEF	SHAPE BUILT	FILMS	STATE
Conceiving	— (pre-dates)	5 selector groups	2	Built
PCOS	pcos_rebuild	5 groups + "Where do I stand" tool	3	Built
IVF & IUI	ivf_rebuild	5 groups + readiness check	2	Built
Getting ready	getting_ready_rebuild	5 groups	0	Built
His side	his_side_rebuild	5 groups + semen-report reader	2	Built
After a loss	After_a_loss_rebuild	4 groups, no tool, two pinned flags	1	Built
Mind & body	Mindbody_rebuild_final + new_guides + twelve_practice_cards	5 groups, no tool/tracker/streak	3	Built

21 **CHANGED** Every TTC brief asked for a tab bar. None got one; all seven got a selector rail instead.

The reason is on the record and is worth agreeing with or overruling once, for the stage: a tab bar *"lights one word, hides four, and tells you nothing about what is behind them — you choose blind"*, on a subject where most people arriving do not know which tab their question belongs to. The rail is five picture cards under the hero: she reads all five, then picks. The brief's tab names survive as the group names, which is the work they were doing.

22 **BUILT** No intermediate menus. A tile opens content.

The Conceiving door's old three-card chooser was removed. No door in the stage opens a hub.

23 **BUILT** PCOS: the brief's own "Keep track of it" list, in the brief's order, after a correction.

The tab had drifted to four tools, two of them invented, and was missing three items that are not tools. Corrected on the user's words *"those 3 points haven't been followed... just follow what's in the pdf."* Now two tools, one way back to her read, one clinical card, one room of people.

24 **BUILT** PCOS: no score, no match percentage, no "you likely have PCOS".

The 20-question checker outputs three plain blocks. The brief's own heading "Your realistic odds with PCOS" was renamed — a possessive plus a probability word is the banned construction, and a test scans the source for it.

25 **NOT BUILT** PCOS: five films the brief marks. One of them the brief says to "reuse existing", and no such film exists.

All five render the honest 16:9 placeholder, so nothing shifts when a file lands. The "reuse existing" one — *Food, insulin and PCOS* — describes what the brief's author expected to find.

26 **BUILT** IVF: no success rates anywhere, and no commerce beyond the consult.

"How to read a clinic's success rate" is about reading someone else's published number critically. Products are marked not-applicable on this bracket ("Not a fit (clinical)"), so there is no product tile and no course upsell.

- 27 **BUILT** His side: the three doctor-authored originals are reused untouched; three reads the brief names were written rather than substituted.
The first build put the nearest existing article behind three tiles — a tile promising "What three months looks like" opened the heat-and-habits essay. Rebuilt 2026-09-06 under a rule that now applies everywhere: **reuse only what is the thing**.
-
- 28 **BUILT** His side owns male-factor content; three other doors reference it by id.
Getting ready's "His part", Conceiving's his-side card and IVF's tests card all name reads defined in His side. Nothing is copied, so one edit lands in four doors. His records and IVF's records are one tool shown twice.
-
- 29 **BUILT** After a loss: "Your body" is the default tab, not "Understand", and there is no tool.
Both are the brief's calls and both are right: days after a loss the first need is physical reassurance and the hospital flag. Turning miscarriage recovery into a number to log is the one place a tool does harm. **Do not add a tracker, calculator or self-check to this area**.
-
- 30 **BUILT** After a loss: "promote" was implemented as an anchor, not a new page.
Six promoted cards open the existing doctor-authored article *scrolled to the named section*. Without that, all six opened one article at the top and a woman who tapped "Rh status and retained tissue" was left hunting. A test asserts every anchor still resolves.
-
- 31 **NOT BUILT** After a loss: one card the brief names, and one optional video, are absent — both for stated reasons.
"What recurrent-loss investigation looks like" is the third *paragraph* of the section above it, not a section — a second card would anchor to the same place, which is the fake promotion the anchor exists to prevent. Splitting the article means editing a doctor-reviewed piece, which the brief forbids. The optional "On trying again" video has no catalogue slot, and inventing one would put a card on the page that no file can ever be mapped to.
-
- 32 **BUILT** Mind & body: the brief's four verbs — reuse, promote, reference, new — each landed as a distinct mechanism.
reuse = the tile names the existing id; *promote* = an anchor, one new card and no new prose; *reference* = another door's read id, so that door still owns it; *new* = the only genuinely new things (four guides, twelve practices, two myth cards).
-
- 33 **BUILT** The four new Mind & body guides, and the twelve practice cards with players.
`ttc_read_sleep_trying`, `ttc_read_bedtime`, `ttc_read_family_asking`, `ttc_read_bringing_him_in`; twelve `TtcPractice` entries with real players. Both companion briefs are fully discharged.
-
- 34 **CHANGED** Mind & body: two myth cards are written out rather than promoted, because the component needs both halves as text.
The brief says promote. A myth tile needs a myth string and a fact string, so there is no way to point one at a section. Both restate material the locked articles already carry. Same compromise as the two After-a-loss myth cards.
-

35 **BUILT** The free eight-session preconception course exists, as data, store and screen.

All eight sessions from `garbh_sanskar_eight_sessions.pdf` in the brief's order — breath, stillness, sound, body and day, food, the two of you, putting it together — free, no badge, sessions redoable. Session 8's picks feed the daily practice.

36 **CHANGED** Before that, the course tile opened the catalogue the course was listed in — reachable, tappable, wrong.

Worth keeping in the notes as the clearest example of the blind spot every wiring test has: each test asked whether the tile opened *something*. It did. No test asked whether the thing it opened was the thing the tile promised. The fix asserts the specific destination by type.

37 **NOT BUILT** Thirteen film slots across the seven TTC doors have no file.

Every entry in the TTC video catalogue has a null URL — the honest state. Each renders real 16:9 geometry, a real title and "coming soon", and does not tap.

38 **NOT BUILT** Hero photographs: His side is still a placeholder, owed with four others.

3. Pregnancy — 10 tiles, 8 doors

Seven of the eight PDFs are door briefs; the eighth builds the four Garbh pillars behind the seventh. Two of the ten tiles have no PDF brief, and one has a brief with nothing built.

TILE	BRIEF	TABS	SHAPE FOLLOWS THE BRIEF?	OWED
Scans & tests	Scans_and_tests_rebuild	5	yes	1 read
Complications	Complications_rebuild_clean	5	yes	nothing
Nutrition & diet	Nutrition_rebuild	5	tabs 1 and 3 changed after the walk (pt 15)	1 film, 1 decision
Belly & skin	Belly_and_skin_rebuild	4	yes — the brief argues for four	nothing
Labour prep	Labour_prep_rebuild	5	yes — timer is the default	4 reads, 2 films
Mind & mood	Mind_and_mood_final	5	yes	1 read, 8 films, 4 audio
Garbh Sanskar	Garbh_Sanskar_rebuild + pillars_build	5	yes — see pt 1 for the home	recordings only
Symptoms	— (plan, not a PDF)	5	n/a	see pt 3, 4
Is it safe?	— (Mobbin + verbal brief)	—	deliberately not a door	photos
Fitness & yoga	FITNESS-DOOR-BRIEF.md (written 2026-09-22)	—	nothing built	the whole door

39 **NOT BUILT** Fitness & yoga is the one pregnancy tile with a brief and no build.

The brief was written on 2026-09-22 (five Mobbin passes, the reuse inventory, the plan) and nothing has been coded. The tile still opens the old one-need hub.

40 **NOT BUILT** Inside it, the yoga screen shows every mother the *seventh* month.

`_kCurrentMonth = 7` is hardcoded with a `TODO` to derive it from the saved due date, and it plays into a placeholder video screen. A woman at 12 weeks opens a screen headed with month 7. This is a live defect independent of the door.

41 **BUILT** Is it safe? is deliberately *not* a five-tab door, and that is the right call.

The whole surface is one field and a lookup; tabs would bury the field. It was rebuilt 2026-09-19 as a search-first screen — asked most, asked recently, for your weeks, four shelves, saved, barcode and photo scanning — and walked three times on the device. Its Tools tile and its bracket tile both open the same body, which is how points 1–5 should look.

42 **BUILT** Scans: the three-card landing is gone and nothing below it was rebuilt.

The brief's constraint, stated four times: this is a reorganisation of a front door, not a rewrite of a stage. The timeline, the nine scan pages, the locker, the decoder and its 27 findings are the same screens, reached one tap earlier.

-
- 43 **BUILT** Scans: no Ask Veda card on the door, and the context is passed one level in — where the brief asks for it.
- An earlier note claimed the route name carried the context. It does not: the route name only picks *which stage's* Ask Veda opens. The scan half was missing and was added on the scan detail screen. This settled the rule for every later door: no Ask Veda tile anywhere.
-
- 44 **BUILT** Scans, after the user's three review rounds: the sheet-based date, one tool header on every leaf, the report locker as an entry, files as a grid, Share in both viewers.
- Sixteen separate findings from the device walk were applied, including the one that became a door-wide rule — **no text on a tinted box** — and the "Before any scan" strip that was tried as a dismissible getting-started row and put back as a plain section on the user's word "*it was better before.*"
-
- 45 **BUILT** Complications: the language rule is honoured exactly — plain line first, medical word second and only in brackets.
- Every card reads "Pregnancy sugar goes high (gestational diabetes)" and never the reverse; the page it opens is still titled "Gestational diabetes", which is the word on her prescription. A test holds every one of them. This is the one place in the app a card title may carry a medical word at all.
-
- 46 **CHANGED** Complications: "never keep a second copy of a condition" was applied as *one page per question*, not one page per word.
- Two cards the brief names by hand — "Cord looped around the neck", "Placenta sitting low" — exist only as report *findings*. "My doctor said I have X" and "my report says X" are two questions; the door links across for those two rather than copying the entries, which is the one thing the rule forbids outright.
-
- 47 **CHANGED** Complications: the gate question was removed — "derive, never ask".
- "Has your doctor mentioned a condition, or do you just want to learn?" is gone; the list is the tab. "Add to my journey" now shows on every page and *asks before adding* ("only if your doctor has said you have it"). One tap cannot add; removing is one tap.
-
- 48 **PARTIAL** Complications: not yet walked on a phone, and the 15 condition reads have not been read one by one for thinness.
-
- 49 **BUILT** Nutrition: roughly seventy cards, and almost no new copy — as the brief demanded.
- The brief's first box is the whole brief: "*nothing here is a new page.*" Every list was verified in code first. Two items are genuinely new: one read and one checklist.
-
- 50 **CHANGED** Nutrition: three things the brief did not know, found by walking the code.
- (i) An *eleventh* condition guide exists — "Overweight in pregnancy" — which the brief's list of ten omits; it is on the rail, because a door showing ten of eleven makes the eleventh unreachable. (ii) The fourth paid tier is called "Book a consultation", not "Book one session"; the brief says don't change labels, so it keeps its own. (iii) See point 51.
-
- 51 **NOT BUILT** Nutrition: the eight fasting pages the brief lists are not pages. The door carries one card. **This needs a decision.**
- All eight are title-and-paragraph rows rendered inline, not tappable, with no detail screen. Each already has a title and a body and would make a small page easily — but the brief forbade building new pages, so it is a decision, not a writing job.
-

- 52 **BUILT** Nutrition: the "link to Complications instead of restating" rule was satisfied one level in, not at the card.
- Read literally, the card would open Complications and throw away the eating advice — the one thing somebody taps a nutrition door for. Every diet guide was already pure diet; what was missing was the link, which used to read "lives in Complications, coming soon" and was not tappable. Now the card opens the diet page and the page's footer opens the condition.
-
- 53 **BUILT** Belly & skin: four tabs, because the brief argues against a fifth.
- Its words: there is no paid consult and only one real medical flag, *"better kept prominent inside the Itching read than pulled into a thin Talk tab."* The first brief to argue against the house shape rather than for it. It cost a fix in the carousel, which had never had a card resting at the seam.
-
- 54 **BUILT** Belly & skin: the rails read the content set rather than listing the named cards.
- The brief says *"the cards named are the visible ones, not the full inventory."* A hand-typed list would have shipped exactly the named cards and silently dropped anything added later — on a door that *replaced* the only route those pages had. Add a twentieth page tomorrow and it appears with no edit.
-
- 55 **BUILT** Belly & skin: the only content change in the whole area is two titles, plain phrase first.
- "The dark line (linea nigra)" and "The pregnancy mask (melasma)" — the rule Complications states in full and this brief calls locked.
-
- 56 **BUILT** Labour prep: the default tab is the contraction timer.
- The brief: *"near the due date people open a tool, not a read."* It became a rule for every door — **the default tab is whichever one somebody opens the app for**, never the most important content.
-
- 57 **BUILT** Labour prep: the birth plan exists, after being listed as a conflict and decided.
- The brief marks it "reuse (pulled out of the old accordion)". There was no accordion and no content — a previous review had *removed* the step because it promised a page and delivered a grey card. Recorded as a conflict rather than guessed; the user's call on 2026-09-11 was *"the PDF says it, so we need it."* The tool now exists, and as a Tool rather than a guide, because what she needs is somewhere to write it down.
-
- 58 **NOT BUILT** Labour prep: six cards hold their place with nothing behind them, and the brief marks five of them itself.
- Two films (the timer explainer, labour start to finish) and four reads (C-section, the first hour, what labour is like and your options, what your partner should do). They render at full size and do not tap. The alternative was a rail of three where the brief describes six.
-
- 59 **BUILT** Mind & mood: the duplication bug the brief names is fixed.
- "'Check how I am feeling' and 'Help me feel better' open the SAME screen. That is a bug."* True — both pushed the old four-tab landing. They now open the door on its Track and Feel tabs.
-
- 60 **BUILT** Mind & mood: nothing was dropped — all 26 reads are on the door, including the fifteen the brief's map does not name.
- The rails are read from the library by group. Where the unnamed fifteen sit is the one editorial decision the file makes, and it is written down.
-

61 **PARTIAL** Mind & mood: three [new] cards had no copy in the brief. One is coming-soon, one is omitted, one was built from data.

"Tell your doctor" — no prose, so a coming-soon card and the sentence is owed by whoever writes the briefs. "Your partner can feel this too" — no copy and marked optional, so omitted; the existing partner piece is linked from where the brief points at it. "Helpline numbers" — not prose but constants, so built as a screen. **Those numbers are still marked "required to confirm" in the data file.**

62 **BUILT** Garbh Sanskar: five sub-tabs, Today as a launcher that does not repeat the libraries, and the one new honesty note.

The four pillar cards switch tab rather than push, and each destination opens on "Today's pick" — which is what "opens Listen at today's pick" means without a second copy of Listen. The note went to area level because the brief's own correctness box says it should. The STOP IF block is the pinned flag, opening "Stop and call your doctor today if...". No streak, no score, no completion state at all.

63 **BUILT** Garbh Sanskar: the two briefs disagreed about the premise and the code settled it — then the pillars were built to final.

The door brief said "*this area is already fully built*"; the pillars brief said the four pillars are placeholders. The second was right: ten raga cards played one bundled drone, Sudoku was a 4×4 with three fixed boards, "Guided Relaxation" was a breathing pattern named relax. All twelve rows closed on 2026-09-12 — nine real public-domain recordings on R2, a 9×9 Sudoku with a unique-solution generator, a nonogram, a 13-step relaxation script, twenty affirmations, sixteen stories, eleven mantras. What remains is voice recordings, by manifest entry.

64 **CHANGED** Garbh Sanskar: Vichara is gone, and the door does not name it. One row on the home still did — see point 1.

Vichara's shelves duplicated Samvad and Shravan, so as a pillar it was two copies wearing a third name. Its genuinely unique half became Buddhi, which is the pillar that is *not* for the baby.

4. Parenting — 11 tiles, 10 doors and one shop

Twelve PDFs for eleven tiles: Development has two, and the reissue replaces the original. All eleven were built by 2026-09-14 and all eleven were walked on a phone. A cross-door sanity test holds that every area exists, every surface resolves, every in-section link lands and every coming-soon card is in the owed ledger.

TILE	BRIEF	SHAPE	WALKED	BRIEF ASKED FOR A DIFFERENT SHAPE?
Sleep	Sleep_rebuild	door, 5 tabs	yes	landing + library
Feeding	Feeding_rebuild	door, 5 tabs	yes	—
Health	Health_rebuild	door, 6 tabs	yes	six, on the brief's own call
Development	Development_Parenting (reissue)	door, 6 tabs	yes	—
Behaviour	Behaviour_Parenting	door, 5 tabs	yes	"do NOT invent a five-tab structure"
Potty training	Potty_Parenting	door, 5 tabs	yes	one library
Early learning	Early_Learning_Parenting	door, 5 tabs	yes	four tabs; split on the user's call
First 40 days	First_40_Days_Prompt	door, 5 tabs	yes	"do not force it into five tabs"
You, Maa	You_Parenting_Maa_rebuild	door, 5 tabs	yes	—
What to buy	What_to_buy_parenting	the shop , on the brief	yes	"do not rebuild, no tabs"
Traditions	Traditions_Parenting	door, 5 tabs	yes	—

65 **CHANGED** Three briefs said not to force the content into five tabs. It was, on the user's standing call that every parenting door wears the shell.

Behaviour ("*one library plus a tools rail, do NOT invent a five-tab structure*"), First 40 Days ("*keep the ten areas plus the tools row*") and Potty ("*collapse the two-door hub into one library*"). The grouping in each case is the user's, dated 2026-09-13, and is written into the file. Worth confirming once for the stage rather than per door.

66 **BUILT** A parenting door holds no content. It is only the shell.

Unlike a pregnancy door, where the tiles *are* the content, a parenting tab names area ids and the screen reads the pages — for this child's age band — at render time. A door that copied page titles into tiles would be a second list of the same things, drifting the first time either was edited. This is why nothing in a parenting door file can be out of date with its section.

67 **BUILT** Tabs drop away and lock with the child's age, from the content's own bands.

A parent of a three-month-old sees one Behaviour tab; a parent of a four-year-old does not see Crying. Development's "When will my baby..." drops away after two years and The leaps after twenty months, on the brief's own scoping. Early Learning locks three of five for a baby — if that reads as too much grey, the tag to question is named in the review file.

68 **BUILT** Four doors have no red-flag strip, each for a stated reason, and it is not an omission.

Health and Complications earned one because they hold same-day medical emergencies. Behaviour, Development, Early Learning and Traditions do not — "*a red-flag strip where there are none trains people to ignore the real ones.*" Their genuine flags live on the pages that earn them. First 40 Days' go-now list is the first card of its tab rather than a pinned strip, "*so people do not learn to scroll past it.*"

- 69 **BUILT** Potty has no tools, no quiz and no star charts — all three on purpose, all three the brief's. *"A quiz that says 'not ready' is the verdict the section deliberately avoids"; "a chart of wins turns a wet afternoon into a visible failure on the wall."*
-
- 70 **BUILT** You, Maa is the one home for the mother's recovery; First 40 Days and Feeding are windows into it.
The brief's judgement call. Three acute recovery pages, the breasts card and Feeding's mastitis flag all open the same pages. One copy, three doors. The frightening-thoughts route is pinned above the triage with "read this one first" — *"do not move it down."*
-
- 71 **BUILT** The mother's own age bands are separate from the baby's.
You, Maa measures her time since birth, not the child's age. Kept separate on purpose.
-
- 72 **BUILT** Twelve cross-door windows, each listed, each a one-line revert.
Feeding's choking card opens Health's page; Health's constipation and allergy cards open Feeding's; Potty's rash link opens Health's; Early Learning's five habits open Behaviour's in-the-moment pages; First 40 Days' crying card opens Behaviour's dark story. Plus seven shared tools by surface id. The full table is in PARENTING-DOORS-REVIEW.md for a line-by-line yes/no.
-
- 73 **BUILT** Merged areas show as deliberate absences, and the tests can tell a merge from a forgetting.
"What to feed at this age" is a tool now, not a rail; Health's "Not sure what is wrong" is the What Changed flow; two trackers over one dataset became one. Each merged area is named in `hiddenAreaIds` so a door test distinguishes it from a dropped one.
-
- 74 **BUILT** What to buy stayed a shop, on the brief's plain words: do not rebuild, do not restructure, no tabs.
The work was three link fixes, one single-source, a soft age default and eight placeholder guides.
-
- 75 **PARTIAL** What to buy: three of the seven "compare" links have no true shelf.
Nasal aspirators and cough-and-cold products land on First aid; malish oils on Lotions. Either add those shelves or reword the links. **Decision needed.**
-
- 76 **PARTIAL** What to buy: four expert-film cards are sponsored inventory over films not yet shot.
The card says "still being filmed" honestly, but a stub is a paid slot over nothing. Worth knowing before a slot is sold.
-
- 77 **BUILT** Traditions: only the first tab changes with age, and no tab ever locks.
Four ceremony charts, one per stage, and the door opens the right one. Everything else is for every age. The brief also asked for no "book an expert" offer — *"for this subject there is genuinely nobody to book"* — and there is none.
-
- 78 **NOT BUILT** Traditions: the two sensitive pages are scaffolds, and the brief asks for the copy to be read before either ships.
"If you would rather not do a ceremony at all" and "When the mother is kept apart" (jaapa seclusion, the not-to-be-touched custom). Tone to be signed off by the user, not auto-written.
-

-
- 79 **PARTIAL** Health: the paracetamol/ibuprofen mg-by-weight table is commented out pending sign-off.
Restoring it needs paediatric and legal sign-off plus a weight calculator the medical board owns. Today the page carries the read-the-bottle framing. **Decision needed.**
-
- 80 **PARTIAL** Health: six tabs were kept after being seen on a phone; the merge, if five is the answer, is already named.
Growing well into Keeping him well.
-
- 81 **PARTIAL** Feeding: the allergen walk-through forgets on close.
The brief asks for a tracker ("tick egg, peanut..."). Built as a walk-through; a tracker that remembers needs a store, a child-scoped table and local-first merge. The screen is already its front. **Decision needed.**
-
- 82 **PARTIAL** First 40 Days: the real day-by-day spine is not built; four fixed day-range pages stand in.
The brief's own lean is to build the light version — "you are on day 12", today's card lit. Real effort; parked for speed. This is the biggest single unbuilt thing in the parenting stage.
-
- 83 **NOT BUILT** Behaviour: eleven pages are scaffolds, by instruction.
The brief's verdict is *"mostly add, not cut"*: two new areas fill the section's missing half — the scared/shy/clingy half and the little habits — and the copy *"is being written separately in the same house voice. Do not AI-generate placeholder copy."* Eleven coming-soon cards hold their places and a test fails if one is not in the owed ledger.
-
- 84 **PARTIAL** Behaviour: the crying-too-much story is eight screens of safety copy in a new medium and wants a clinical read.
-
- 85 **NOT BUILT** Early Learning: 58 stories have a "listen" button and no recording.
The brief's own words: *"a story library with no narration is half-built, so recording the story audio is the first job."* The rhymes collection is a scaffold for the same reason.
-
- 86 **BUILT** Early Learning: the activity picker is *not* a tool on the door, because the first tab's rail is the same set.
The brief: *"the activities in Tab 1 and the 'Something to do today' picker are the same set. Keep one."*
-
- 87 **BUILT** Development: the reissue's one structural call was honoured — the reassurance pages come first, the four areas of growing sit inside the tracker.
"A parent's real question is 'is he okay, and what do I do', not 'show me his profile'." And the activities now sit beside the reassurance pages, which is the fix the brief asks for.
-
- 88 **PARTIAL** The old parenting hub configs still describe the two-door homes the V3 tiles bypass.
Harmless today because the tile checks for a door first. Retire, or leave for the classic home — **one decision.**
-

5. Skilling — 12 tiles, 7 doors, 5 plan sheets

Twelve briefs, one per skill. Seven doors built between 2026-09-14 and 2026-09-18; five tiles still open a plan sheet. Read points 8 and 9 first: in a release build a reviewer sees none of this.

TILE	SHAPE	ACTIVITIES FILLED	WALKED ON A PHONE
Coding	door, 5 tabs + the shell	36 of 36	yes — at 8, 5 and 12
Communication	door, 5 tabs (three band cards)	36 of 36	yes — at 12 and 8
Confidence	door, 6 cards	36 of 36	yes — at 8
Thinking	door, 5 tabs	none	no
Stillness	door, 5 tabs	none	no
Feelings	door, 6 cards + off-ramp bar	none — clinical review first	no
Making (Creativity)	door, 5 tabs	none	no
Focus · Maths · Memory · Reading · Values	plan sheet only	—	—

89 **BUILT** The five tabs are the brief's five child surfaces, in the brief's order, on the user's instruction to follow the brief literally first.

"Follow the brief completely, I want to see how the brief does; then give your suggestions." Every skill brief lists the same five — *Today's thing to try* · *Things to do* · *Lessons* · *AI, explained* · *What I've made and tried* — and a door file cannot invent a sixth surface without a brief naming one. The regroupings the build would have proposed are written up separately, not applied.

90 **BUILT** Confidence and Feelings have six cards, because their briefs list six child surfaces.

Confidence adds the recorder and the keepsake as separate cards; Feelings adds her journal. Both on the user's explicit call to stay PDF-literal.

91 **BUILT** The four parent surfaces are not tabs. They sit behind a grown-up gate, on one screen, reached from the closing card under every tab.

Set-up and consent, the course shelf, the product shelf, the parent note. The gate is a sum in words or a parent-set PIN.

92 **BUILT** Band scoping: 6–8, 8–11, 11–14, with a floor at 6.

A six-year-old sees the first band card open and the next two locked "From 8 years"; a twelve-year-old sees three cards and the ones she has grown past are gone. Under the floor every child tab is locked and the grown-up side stays open. The door re-scopes live when the date of birth changes — no restart.

93 **BUILT** Consult is held on six of the seven doors, exactly as each brief holds it.

Coding, Communication, Thinking, Stillness, Feelings and Making all hold it — "*speech delay and stammering are not a skill gap and not a course*", "*real distress is not a meditation gap*." Confidence un-holds it, and the coach sits as a row under the classes on the parent screen, because the parent books.

- 94 **BUILT** No scoring anywhere in the stage, and a test scans the tree for the vocabulary.
Stillness refuses a streak with its reason on the record: "*a streak turns a non-striving practice into a target, and a broken streak makes a child feel she has failed at calming down.*" Making refuses likes, ranking, a featured wall and any cross-user gallery. The keepsake has no numeric member at all.
-
- 95 **BUILT** Feelings: the safety off-ramp is a bar on every screen of the door, not a card.
The brief: "*not buried, present on every screen of this door.*" No line in the door claims to treat, diagnose or fix.
-
- 96 **NOT BUILT** Feelings: the crisis pathway is a stub that stops, on purpose, and needs the experts.
Also owed: a legal review of the child-private journal, key custody, and verification of the helpline numbers. **Three decisions, none of them code.**
-
- 97 **NOT BUILT** The consent verifier is an interface and a passing stub, flagged for legal review — as the brief asks.
The settings screen says so on screen: "Not verified yet (stub, pending legal review)". Whether a walk-through should instead *refuse* to open the door is a decision.
-
- 98 **PARTIAL** Communication's 11–14 band activities were written in-repo, not by the task author.
6–8 and 8–11 came from the author's task PDFs; the third band had none, so twelve were written to match and are owed an author review. Flagged so it is not mistaken for authored content.
-
- 99 **NOT BUILT** Four of the seven doors have no activity content at all.
Thinking, Stillness, Feelings and Making are frames with placeholder slots — 36 activities each — because no task PDFs exist for them. Feelings' are additionally marked "care": clinical review before any fill.
-
- 100 **NOT BUILT** Five briefs have no door: Focus, Maths, Memory, Reading, Values.
Their tiles open the plan sheet, which shows the plan rather than an empty room — "*twelve doors onto twelve empty rooms is worse than no doors.*"
-
- 101 **BUILT** Stillness is the calm source; Focus, Feelings and Memory reference its page rather than rebuilding breath.
Recorded now so the three unbuilt doors inherit it rather than growing their own.
-
- 102 **NOT BUILT** Across the seven doors: 336 lesson, course, product and note slots are placeholders, and no shelf string promises a future.
A test holds that last part — enrol and buy are stub sheets and say so.
-

6. The two home lists, and the bottom nav, point by point

The change-lists supplied for the pregnancy and parenting homes, and the bottom-nav list, each checked against the shipping V3 screen. Both lists are essentially done; the exceptions are numbered.

6A · PREGNANCY HOME — EIGHT POINTS

#	ASKED FOR	SHIPPING	
1	"What are you looking for?" first, then This Week Explained	eyebrow "What are you looking for?" over "Start anywhere", then the film	done
2	Recommended Watch → "This Week Explained"; drop "Six minutes this week"; the week's film plays below the heading	One heading, no eyebrow, at the page's second-largest type; the film is full-bleed and plays in place . The old heading is commented out, kept for revert	done
3	Garbh Sanskar unchanged, immediately after	the full-bleed band, directly after the film	done
4	Medicine Reminder unchanged, after Garbh	as asked	done
5	My Journal: "Create a memory for your baby to show when it grows up"	that exact line; the card under it untouched	done
6	New Recommended Videos section above Reads, headed "Watch These Videos This Week", ~3 week-relevant films	three rows with a small thumb, week-matched, the week's own film excluded	done, see 103
7	Recommended Reads unchanged, after Videos	after Videos; subtitle changed from "Short enough for today" to "Research-backed articles"	done
8	The whole order	Start anywhere → This Week Explained → Garbh → Medicine → My Journal → Videos → Reads → Products → Tools	done

103 **PARTIAL** The videos shelf can show fewer than three, by design, and none of them plays.

Every candidate must actually cover the week — there is no nearest-week fallback, because *"a shelf of three that are all a trimester away is worse than a shelf of two."* Separately, the shelf ids are deliberately left out of the dev video map, so all three show the "film arriving" poster (point 10).

104 **NOTE** Two things were removed from the home that the list did not ask about, both on earlier review instructions.

The kick-count / movement row (placement rejected: the first thing after the photograph was a clinical instruction) and "Note for baby" / "Add a photo" from My Journal (an earlier review asked for two doors, not four). Both kept commented. The father's app still creates the note type from his own screens.

6B · PARENTING HOME — SEVEN POINTS

#	ASKED FOR	SHIPPING	
1	What to Buy first among the 11, not the page's top heading	built 2026-09-16, reverted 2026-09-18 on the user's own instruction; hoist kept commented	see 18
2	This Phase Explained: video first, then the written description, then resources	exactly that order; the video is the same phase-matched film the old "Watch" section showed, only moved	done
3	How Your Baby Is Doing: only what is actually changing now; each change opens video → text → detail	one card per domain that has a milestone this phase, derived from the phase's AAP/CDC list; a domain with nothing changing does not appear; the sheet is video → text → more	done
4	Rename to "Activities to do today with your baby"; ≥3 a day; Done stays visible till tomorrow; Change swaps immediately and the rejected one does not come straight back; history kept	all of it, in a store with a date on it; the picks are deterministic on the date so reopening does not reshuffle	done
5	Read: drop "Short enough for today", use "Recommended Reads for Today", age-relevant	"Recommended reads for today" (sentence case — point 17)	done
6	Things That Help → "Recommended Products for Your Baby", age-relevant	"Recommended products for your baby", age-filtered	done
7	My Journal: drop "Keep Today", use "Record a Memory for Your Child Today"	"Record a memory for your child today"	done

105 **BUILT** The three-a-day activities write through to the Brain tab's own store, so the two surfaces cannot disagree.

One event, two readers, one writer each. The home store only remembers that the tick happened on one of today's three cards, which is a home-screen fact.

106 **BUILT** No counter, no streak, no "2 of 3" under the activities — one line about tomorrow.

107 **BUILT** "How your baby is doing" has an empty state that is still an invitation, never a hidden section.

A phase with nothing listed shows the line and the door to Development. Standing rule: a feature is never hidden; only the empty copy changes.

6C · BOTTOM NAVIGATION

108 **BUILT** Home · Products · Tools · Brain activities · More, in that order, with Community inside More. "My Child" is labelled **Home**; "Brain" is **Brain activities**, the one two-line label in the app (at 11px it does not fit a fifth of a small phone, and "Brain acti..." is worse than two small lines). The bar is now one shared component across stages rather than three divergent ones, and it lost the filled purple disc behind the active icon — the one rule it still broke.

109 **NOTE** The pregnancy bar is a different set: Today · Products · Tools · Calendar · Community. Same component, different tabs. Worth deciding whether the two stages should converge, or whether the difference is deliberate.

110 **BUILT** V3 is the default home on every stage, and the version pill is gone from the home. The user's decision of 2026-09-16: *"the version 3 screens are final, the classic screens are kept for reference."* The switch moved to You → Developer, so a final home carries no switch — which is also why a review build needs the PV_DEV define (point 13).

7. Content still owed, counted

Every door brief carries the same rule — *"if a referenced page is missing, STOP and list it rather than creating one."* Those lists are one ledger, `docs/DOOR-CONTENT-OWED.md`, and a test per door fails if a coming-soon card is not in it. A card that is owed holds its place at full size and does not tap; nothing on a rail moves the day the piece lands.

STAGE	ROWS	COMING SOON	BUILT FROM DATA	OMITTED	NEEDS A DECISION
Pregnancy · 7 doors	27	12	1	1	1 · fasting pages
Parenting · 10 doors + shop	76	43	25	0	3
Skilling · 7 doors	77	46	11	0	7 (+1 stopped)
TTC · 7 doors	—	13 films	—	2	0

- 111** **NOT BUILT** **Pregnancy: six reads, eleven films, four audio tracks, one decision, one confirmation.**
Reads — the scan-person read, C-section, the first hour, what labour is like, what the partner does, "tell your doctor". Films — the supplements video, two labour films, three guided-breathing watch-alongs, five meditations. Audio — four calming tracks, which the brief says to reference Garbh Sanskar's assets, so a wiring job. Decision — the fasting pages (point 51). Confirmation — the helpline numbers (point 61).
- 112** **NOT BUILT** **Garbh Sanskar: all twelve content rows are closed. What remains is voice recordings, by manifest entry — no code.**
The relaxation script (13 entries), the body-awareness journey and the Samvad narrator pieces. Nine real audio recordings are already live on R2.
- 113** **NOT BUILT** **Parenting: the film list is the single biggest content debt in the app — roughly 85 slots across seven doors, plus 58 story narrations.**
In the order the briefs themselves prioritise: the eleven feeling-films on You Maa (*"a mother needs to hear 'I feel nothing at all' said aloud by someone who has been there"*), the "doing it together" activity clips, the Indian-toilet film (*"the clearest missing video in the section"*), the choking response, seventeen ceremony films.
- 114** **NOT BUILT** **Parenting: 28 pages of copy are scaffolds, all of them because a brief said the copy would be supplied.**
Eleven in Behaviour, eight in Traditions, eight buying guides, four in Potty, two in You Maa, two in Early Learning, two in Health, one in Development, three in First 40 Days. *"Do not AI-generate placeholder copy"* is the instruction, and it was followed.
- 115** **PARTIAL** **Several "illustrations" are drawn in code rather than commissioned, and can be swapped for artwork without touching a page.**
Food textures and cut-it-this-way, the nappy colour strip, the rash grid, the four newborn customs, thermometer routes, dehydration signs. Two want photographs rather than drawings: the rash grid ("this is HFMD") and the newborn-skin carousel.

- 116** **PARTIAL** Photographs: findings, conditions and several door rails carry tone placeholders from a public-domain pool.
- 27 findings and 20 conditions. A real photo per finding is a content job. See also point 12 — the hosting has to move to R2 first.
-

8. What a reviewer should know before opening the app

- 117** **NOTE** Build with `--flavor parent --dart-define=PV_DEV=true`, in release, to see all four stages.
- 118** **NOTE** Skilling will show plan sheets, not doors (points 8–9). A debug build is the only way to walk a skill door.
- 119** **NOTE** Images may be missing at random until the R2 upload happens (point 12). It is not a layout bug.
- 120** **NOTE** A poster with no play control is the honest "film arriving" state, not a broken player (points 10, 37, 113).
- 121** **NOTE** Nothing in any stage gives a personalised probability, a score, a match percentage or a diagnosis, and tests scan the source for the vocabulary.
- Where a clinician owns a decision the app explains it, reminds about it or helps her prepare for it — it never recreates it. A clinic-owned due date is never second-guessed.
- 122** **NOTE** Everything written opens in one reader, with one exception found in this pass — point 4.
- 123** **NOTE** Hindi: a large amount of Pregnancy ships in Devanagari and stays. New copy since 2026-08-27 is English only, by decision — English in the Hindi build is the expected state, not a bug. TTC is the exception (point 16).
- 124** **NOTE** The last full green suite was 4,409 tests at commit `09bc1f9`. Eight files and one new brief were uncommitted when these notes were written.
- Per-door contract tests exist for all 25 built doors, plus three cross-door sanity tests that hold reachability: every area exists, every surface resolves, every in-section link lands, every coming-soon card is in the owed ledger.
-

Where the detail lives. `docs/DOOR-CONTENT-OWED.md` — every owed row, by door · `docs/PARENTING-DOORS-REVIEW.md`, `docs/PREGNANCY-DOORS-REVIEW.md`, `docs/SKILLING-DOORS-REVIEW.md` — the per-door questions awaiting a decision · `docs/STILL-OPEN.md` §21–§74 and §100–§104 — the reasoning behind every call above, by door · `docs/TTC-DOOR-BUILD.md`, `docs/PREGNANCY-DOOR-BUILD.md`, `docs/SKILLING-DOOR-BUILD.md` — the playbooks each stage's doors were built to · `docs/FITNESS-DOOR-BRIEF.md` — the one written, unbuilt door.
